Sensitive Species Recommendation (Please check 1 box below)					
<input type="checkbox"/> R2 Sensitive Species (SS)		<input checked="" type="checkbox"/> Not R2 SS, but should be considered for other Emphasis Species Lists			
<input type="checkbox"/> Not R2 SS and Not of Concern Now		<input type="checkbox"/> Insufficient Information Available to make a recommendation			
Recommendation Rationale					
<p>Known only from central and southwestern CO; locally common in upper Arkansas River Valley. Typical habitat is south-facing slopes at 9300 ft in open pinyon-juniper woodlands. Often reproduces from roots, allowing it to survive and colonize at higher altitudes than other opuntiads. No downward trends or threats identified. Recommend that the PSICC and GMUG consider for other Emphasis Species lists. However, G2G3 ranking is a concern.</p>
