<input type="checkbox"/> Not R2 SS and Not of Concern Now		<input type="checkbox"/> Insufficient Information Available to make a recommendation			
Recommendation Rationale					
<p>Regional endemic of north-central CO and southeastern WY. Found on rocky soils in sagebrush grasslands. In WY, distribution is limited to the Medicine Bow NF and abundance is uncertain; in CO, the species occurs on the AR, White River and Routt NFs and appears to be more abundant. Although there is little information on trends, over-collection was the only threat identified. Because of its limited distribution and uncertainty about its abundance and trends in Colorado, we recommend that this species be considered as an Emphasis Species.</p>
