

Watersheds

This map illustrates the 5th-level areas found on the Grasslands of the Hydrologic Unit Code (HUC). HUC's are a way of identifying all of the drainage basins in a nested arrangement from largest (region) to smallest (subwatershed). The 5th level is otherwise known as the watershed level.

HUC boundaries were developed by the USDA Natural Resource Conservation Service. Texas and New Mexico HUCs were revised in 2005. Oklahoma HUCs were published prior to 2001. More information about HUCs can be found on the NRCS website at <http://www.nrcg.nrcs.usda.gov/products/datasets/watershed/>.
