<b>Sensitive Species Recommendation</b> (Please check 1 box below)					
<input type="checkbox"/>	<b>R2 Sensitive Species (SS)</b>	<b>Not R2 SS, but should be considered for other Emphasis Species Lists</b>			
<input checked="" type="checkbox"/>	<b>Not R2 SS and Not of Concern Now</b>	<b>Insufficient Information Available to make a recommendation</b>			
<b>Recommendation Rationale</b>					
<p>Species is a regional endemic with most of its range on occurring on the Shoshone NF and in two counties. Outside R2, it is found in c Montana and nw Wyoming (including Yellowstone National Park). In Wyoming, it is ranked “S2” and is on the watch list. Population trends are presumed to be stable. Habitat trend is thought to be stable because it occupies alpine habitats in remote settings. Habitat vulnerability to threats is low. It occurs in designated wilderness areas and in proposed and potential RNAs.</p>
