

Not R2 Sensitive Species and Not of Concern

Recommendations and Evaluations

Common Name: Fendler's ceanothus

Scientific Name: *Ceanothus fendleri*

Recommendation: Not R2 Sensitive Species and Not of Concern

Recommendation Rationale:

Within R2, species occurs in Colorado, South Dakota, and Wyoming; it is listed as S2 in South Dakota. Outside R2, it is located in Arizona, New Mexico, Texas, and Utah. Apparently common in Arizona as it makes up about 50% of the Mule deer diet. It is found in open woods on sandstone and limestone hillsides and rocky ledges in western South Dakota. Species seems to be abundant enough inside and outside to not warrant sensitive species status.
