<b>Sensitive Species Recommendation</b> (Please check 1 box below)						
	<b>R2 Sensitive Species (SS)</b>		<b>Not R2 SS, but should be considered for other Emphasis Species Lists</b>			
<b>X</b>	<b>Not R2 SS and Not of Concern Now</b>		<b>Insufficient Information Available to make a recommendation</b>			
<b>Recommendation Rationale</b>						
<p>This species is at the northern edge of its range in CO and KS. The Kansas Natural Heritage Inventory has 29 occurrences, but it is not tracked in Colorado. Floristic inventory on the Comanche NG found it to be widespread, though its habitat may be limited (rock outcrops, especially limestone breaks and sandstone rimrock areas). Steve Olson indicates that it is fairly frequent within its habitat, and adapted to somewhat unstable conditions. Apparently stable trend for habitat and populations, though there is some concern over oil and gas development in KS. Livestock grazing not thought to be a threat because the plant grows in sparsely vegetated areas where little grazing occurs. This species does not merit sensitive species status, and is not of concern on a regional basis.</p>						

<b>Name/Title</b>	Andrew Kratz, regional botanist	<b>Date</b>	March 9, 2007

\* = S1 rank from NatureServe may be incorrect if there are now 29 known occurrences in the Kansas Natural Heritage Inventory.
