<b>Sensitive Species Recommendation</b>			(Please check 1 box below)			
	<input type="checkbox"/> <b>R2 Sensitive Species (SS)</b>		<input type="checkbox"/> <b>Not R2 SS, but should be considered for other Emphasis Species Lists</b>			
<input checked="" type="checkbox"/>	<b>Not R2 SS and Not of Concern Now</b>		<input type="checkbox"/> <b>Insufficient Information Available to make a recommendation</b>			
<b>Recommendation Rationale</b>						
<p>South Dakota, Colorado and Kansas have rankings of SR, while Nebraska ranks it S5. It has been documented on the Pawnee, Cimarron, and Oglala National Grasslands and is likely to occur on the Thunder Basin and Buffalo Gap National Grasslands. It is known only from one location in Wyoming, where it is listed as S1, but this population is not on Forest Service administered land. The Region 2 distribution lies at the northern edge of the species natural range. It is an early successional annual that is stable if not increasing in disturbed areas. It is recommended that this species be ranked Not R2 SS and Not of Concern Now.</p>
