Sensitive Species Recommendation (Please check 1 box below)					
	R2 Sensitive Species (SS)		Not R2 SS, but should be considered for other Emphasis Species Lists		
<input checked="" type="checkbox"/>	Not R2 SS and Not of Concern Now		Insufficient Information Available to make a recommendation		
Recommendation Rationale					
<p>This species is not of concern now because it does not occur on NFS lands in R2 and it is not likely to occur on NFS lands. It is a narrowly restricted edaphic endemic that occurs on various members of the Niobrara shale formation. This formation is close but does not occur on NFS lands. It is restricted to a 50 KM long corridor in the Arkansas River Valley from Canyon City to Pueblo. If this species occurred on any R2 NFS lands or were determined likely to occur on R2 NFS lands then it would afford R2 Sensitive Status because it is so rare.</p> <p>John Proctor</p>
