Sensitive Species Recommendation				(Please check 1 box below)		
	<input type="checkbox"/> R2 Sensitive Species (SS)		<input type="checkbox"/> Not R2 SS, but should be considered for other Emphasis Species Lists			
<input checked="" type="checkbox"/>	Not R2 SS and Not of Concern Now		<input type="checkbox"/> Insufficient Information Available to make a recommendation			
Recommendation Rationale						
<p>Though apparently extirpated from South Dakota, this species is much more common and widespread toward the west -- from Wyoming and Colorado to the West Coast and into western Canada. Rocky Mountain Herbarium records available online (see http://www.esb.utexas.edu/tchumley/wyomap/AST I R/micnut.pdf) indicate that it is widespread in WY. Weber and Wittmann's Colorado Flora reports the wide range of habitats to be, "Dry, wooded slopes and meadows, foothills to montane and subalpine." It does not warrant sensitive species status, and is not of concern at this time.</p>						

Name/Title	Houston/Sidle Revised by Andrew Kratz, Regional Botanist	Date	10/03/2002 Jan 18, 2003
