<b>Sensitive Species Recommendation</b> (Please check 1 box below)					
<input type="checkbox"/> <b>R2 Sensitive Species (SS)</b>		<input type="checkbox"/> <b>Not R2 SS, but should be considered for other Emphasis Species Lists</b>			
<input type="checkbox"/> <b>Not R2 SS and Not of Concern Now</b>		<input checked="" type="checkbox"/> <b>Insufficient Information Available to make a recommendation</b>			
<b>Recommendation Rationale</b>					
<p>Outside R2, occurs only in UT. Rare within R2, with only two records on NFS lands, last seen in 1920 and 1938. Habitat includes pinyon-juniper communities. Likely has limited dispersal capability. However, reviewers commented that there are more records of this plant in Colorado than were considered in the evaluation (26 occurrence records in Colorado, with population sizes ranging from 33 to &gt;1,000 individuals). There is substantial uncertainty as to whether land management activities pose a threat to the species. Additional surveys are needed to determine the status of the species on NFS lands. We conclude that there is insufficient information at this time to determine whether or not this species warrants sensitive status.</p>
