

Insufficient Information Available at This Time

Recommendations and Evaluations

Common Name: beavertip draba

Scientific Name: *Draba globosa* (*D. apiculata*, *D. densifolia* var. *apiculata*)

Recommendation: Insufficient information available at this time

Recommendation Rationale:

There is insufficient information available to make a recommendation. Census data is needed for the 4 populations known to occur on FS units in Colorado. Also, it needs to be determined if sheep grazing does or will occur on or near these CO populations and what the effects, if any, are to the populations. .Moreover, we need to know what the management allocations are on and near the habitat of these CO. populations. The evaluation sheets address WY threats but not CO threats.
