<b>Sensitive Species Recommendation</b>				<b>(Please check 1 box below)</b>		
<input type="checkbox"/> <b>R2 Sensitive Species (SS)</b>		<input type="checkbox"/> <b>Not R2 SS, but should be considered for other Emphasis Species Lists</b>				
<input type="checkbox"/> <b>Not R2 SS and Not of Concern Now</b>		<input checked="" type="checkbox"/>	<b>Insufficient Information Available to make a recommendation</b>			
<b>Recommendation Rationale</b>						
<p><b>Circumboreal species, occurring in wetland plant communities. In WY, there are at least 12 extant populations, typically occurring in cold water bogs, often on marly substrates. Detailed information is lacking for CO and SD, where it is not tracked by the state Heritage Programs. Although it occurs on rare, glacial relict habitats, there is little information available regarding risks to this species. We conclude that there is insufficient information to conclude whether this species merits designation as a sensitive species.</b></p>
