<b>Sensitive Species Recommendation</b> (Please check 1 box below)					
<input type="checkbox"/> <b>R2 Sensitive Species (SS)</b>		<input type="checkbox"/> <b>Not R2 SS, but should be considered for other Emphasis Species Lists</b>			
<input type="checkbox"/> <b>Not R2 SS and Not of Concern Now</b>		<input checked="" type="checkbox"/> <b>Insufficient Information Available to make a recommendation</b>			
<b>Recommendation Rationale</b>					
<p>A regional endemic of northcentral CO, northeastern UT and southwestern WY. There are 8-10 occurrences in WY (one on the Medicine Bow NF) and about 20 occurrences in CO. Found in cushion plant or sagebrush and juniper grassland communities on windblown ridges, gravelly hills, rocky knolls, or clay hillsides at 6,500-8,700 ft. Population and habitat trends are unknown. Habitat is subject to ongoing activities such as off-road vehicle use, road building, and other surface disturbance, but response of this species to these activities is unknown. At this time, there is <b>insufficient information</b> available to determine whether the species merits sensitive status.</p>
