

Insufficient Information Available at This Time

Recommendations and Evaluations

Common Name: rosy lupine

Scientific Name: *Lupinus roseolus*

Recommendation: Insufficient information available at this time

Recommendation Rationale:

Evaluator's note: "This taxon is reported in NatureServe (2002) as endemic to Wyoming, but apparently does not represent a valid name. It is not accepted in the current flora (Dorn 2001). Phillips (1995) lists it as a synonym of *Lupinus argenteus* ssp. *argenteus*. Hitchcock and Cronquist (1961) list it lump it [sic] in with *Lupinus depressus* in *L. argenteus* var *depressus*."
