Sensitive Species Recommendation (Please check 1 box below)						
<input type="checkbox"/> R2 Sensitive Species (SS)		<input type="checkbox"/> Not R2 SS, but should be considered for other Emphasis Species Lists				
<input type="checkbox"/> Not R2 SS and Not of Concern Now		<input checked="" type="checkbox"/> Insufficient Information Available to make a recommendation				
Recommendation Rationale						
<p>Only one known occurrence of the species in Region 2. The species has a limited distribution west and south of Region 2, and appears to be at the periphery of its range in Colorado. It may not be common in California, but no information is known about its frequency or abundance in other states outside of Region 2. The Arizona Flora suggests that this species occurs at lower elevations than are usually administered by the Forest Service, at least in that state. Since there is no real information about this species frequency or abundance in Region 2, we consider that there is insufficient information available to make a recommendation at this time.</p>
