<b>Sensitive Species Recommendation</b> (Please check 1 box below)					
<input type="checkbox"/> R2 Sensitive Species (SS)		<input type="checkbox"/> Not R2 SS, but should be considered for other Emphasis Species Lists			
<input type="checkbox"/> Not R2 SS and Not of Concern Now		<input checked="" type="checkbox"/> Insufficient Information Available to make a recommendation			
<b>Recommendation Rationale</b>					
<p>The distribution of this species is restricted to WY, CO and NM (G2). Of these three states, NM contains the highest abundance. It occurs in dry, open shrub lands or grasslands at mid elevations in the mountains. In WY, it is known from only 1 historical occurrence which has not be relocated since 1900; that population was found in a sandy draw in montane foothills at 6,000 ft., well below NFS lands. In CO, there are 6 occurrences. One evaluator suggests that it has not been adequately surveyed. No information is available on population trend, habitat trend, or threats. At this time, there is insufficient information available to determine whether the species merits sensitive status.</p>
