Sensitive Species Recommendation (Please check 1 box below)					
<input type="checkbox"/> R2 Sensitive Species (SS)		<input type="checkbox"/> Not R2 SS, but should be considered for other Emphasis Species Lists			
<input type="checkbox"/> Not R2 SS and Not of Concern Now		<input checked="" type="checkbox"/> Insufficient Information Available to make a recommendation			
Recommendation Rationale					
<p>Only two known occurrences in CO; known from nowhere else in the U.S., although it has a larger distribution in Canada around Hudson Bay. It is found in alpine riparian sites on limestone substrate. There are no indications of changes in the habitat at either known site, one of which is in a wilderness area. Population and habitat trends are unknown, and there is no information on what the response of the species might be to disturbance on management actions. At this time, there is insufficient information available to determine whether the species merits sensitive status.</p>
