<b>Sensitive Species Recommendation</b> (Please check 1 box below)					
<input type="checkbox"/>	<b>R2 Sensitive Species (SS)</b>	<input type="checkbox"/> <b>Not R2 SS, but should be considered for other Emphasis Species Lists</b>			
<input type="checkbox"/>	<b>Not R2 SS and Not of Concern Now</b>	<input checked="" type="checkbox"/> <b>Insufficient Information Available to make a recommendation</b>			
<b>Recommendation Rationale</b>					
<p>Distribution outside R2 includes AZ, ID, and UT where it is reported to occur in moist sites in coniferous forests (G4). In R2, it is reported from plateaus on the western slope of CO (S1). It is found in wet spruce forests, along streambanks, along lakeshores, and other vernal moist places. It may be locally abundant but populations are few. No information is available on habitat or population trends, or potential threats. There is insufficient information available at this time to determine whether the species merits sensitive status.</p>
