

Region 2 Other Emphasis Species List

Broad-winged Skipper (*Poanes viator*)

Recommendation Rationale: Not R2 Sensitive Species, But Should Be Considered For Other Emphasis Species Lists

Widespread and abundant in the eastern U.S., but R2 distribution limited to north central Nebraska. Found in freshwater marshes, which can be subject to modification through weed or cattail invasion, or dewatering. Localized imperilment is a potential threat. Therefore, we recommend that affected Nebraska NF units assess the status of this species and consider for special management status where such may be needed to protect species viability.
