Sensitive Species Recommendation (Please check 1 box below)						
	R2 Sensitive Species (SS)	<input checked="" type="checkbox"/>	Not R2 SS, but should be considered for other Emphasis Species Lists			
	Not R2 SS and Not of Concern Now		Insufficient Information Available to make a recommendation			
Recommendation Rationale						
<p>This species is known from central European mountains, the Ukraine, Alaska and Colorado. There are only 7 known occurrences in Colorado, where it is found among mosses at high elevations. Conditions on at least 2 of these sites are thought to be stable, although unregulated recreation, road and trail construction, or browsing by mountain goats could pose a threat at some sites. At this time, there is no evidence of downward trends in populations or habitat. However, this species is an important component of biological diversity and should be considered for other emphasis on the Arapaho-Roosevelt, Pike-San Isabel, and White River NFs.</p>
