

2011 ANNUAL OPERATING INSTRUCTIONS

Glenwood Ranger District

Gila National Forest

Tennessee Allotment #422

Prepared By: _____

District Range Staff

Date: _____

Approved By: _____

District Ranger

Date: _____

Annual Operating Instructions

I. INTRODUCTION

These Annual Operating Instructions document your discussion with Kendall Brown and Allen Graves on December 22, 2010 at the Glenwood Ranger District Office.

Term Permitted Livestock Numbers:

Permittee	Number & Class of livestock	Dates
Three-Up Outfit	80 Cow/Calf *	03/01 – 02/28

* Total not to exceed 600 Head Months.

2011 Authorized Use:

Permittee	Number & Class of livestock	Dates
Three-Up Outfit	55 Cow/Calf	03/1 – 3/30
Three-Up Outfit	59 Cow/Calf	4/1 – 08/15
Three-Up Outfit	59 Cow/Calf	11/16 – 2/28

2011 Pasture Rotations:

Class of Livestock	Rotation Date	Pasture
Cow/Calf	3/1– 8/15	Pipe
Cow/Calf	8/16– 11/15	Private land
Cow/Calf	11/16 – 12/15	Pipe
	12/16 – 2/28	West
	Rest	East

The above schedule for stocking the allotment depends upon the availability of forage and water. Some flexibility in the above pasture rotation dates will be allowed for justifiable causes such as weather conditions, livestock management needs, and range conditions. If there is a need to deviate from the above pasture rotation schedule by more than 15 days, you must notify the District Ranger of the proposed change in the pasture rotation date and the reason for the change. A deviation from the above schedule of more than 15 days must be approved by the District Ranger verbally or in writing.

The District Ranger must be notified 5 days prior to the time livestock enter or leave the Forest if the placing on or removal of livestock is not planned in the above schedule, and more than 10 head are being moved.

II. MANAGEMENT OF LIVESTOCK

You are responsible for monitoring water availability and forage utilization. It is your responsibility to move your livestock when sufficient water is no longer available or when proper forage utilization is achieved in a pasture. You are responsible for keeping track of and maintaining control of your livestock. In the event your livestock are found to be out of the scheduled pasture, you will be required to find, gather, and return your animals to the proper pasture as soon as possible.

III. IMPROVEMENT MAINTENANCE

All range improvements assigned in the 10-year Term Grazing Permit are to be maintained in a functioning condition. In the event these improvements cannot be brought up to a functioning condition, you should notify the Range Staff at the Glenwood Ranger District to schedule them for reconstruction as funds become available.

1. You requested permission to construct a pipeline from Tennessee Well south to Post Office corral across highway through box culvert. This will improve water distribution and livestock use in Pipe Pasture. You requested metal troughs since the metal ones freeze less than the plastic. Contact Allen Graves to arrange clearances and a permit modification. This would be your highest priority for a new project.
2. You are authorized to clean-out Geronimo & Box Canyon rock headers with a rubber tire tractor only. This was not completed but is still planned if conditions permit.

IV. GENERAL INSTRUCTIONS

1. Fire: Branding and warming fires should be used with good judgment - not on windy days or during times when fires are specifically restricted. The Glenwood District may allow naturally ignited fires to burn on the district this coming year. We will notify you if we plan to let a fire burn on your allotment.

2. Records: In order to close out permit modifications you must provide documentation of materials and labor constituting your contribution to the permit modification.

You must provide documentation of cattle numbers; dates of entering and leaving pastures, shipping dates and cattle losses (grown stock and calves). This information is used to substantiate the carrying capacity of the allotment. The information demonstrates use and the need for forage to meet the economic needs of the county. This information may also be used to establish cause and effect if there is a significant change in calf crop (Example, a wolf pack becomes established near your allotment).

3. Heavy Equipment Use: Please notify district well in advance of any plans to use heavy equipment so that necessary clearances and/or permits can be obtained. You will be notified by the district when you can proceed.

4. Credit/Refund: Any credit or refund applications for grazing fees must be made as far in advance as possible. Credit/Refund applications are not retroactive and will be approved only if the District Ranger is notified of livestock removal, prior to, or at the time, the livestock are taken off the allotment. **You will be required to provide your Social Security or Tax ID number in order for a refund to be processed.**

A \$25 administrative fee will be charged for any additional bills for collection that are sent to you due to either late payment or for split billing on seasonal allotments. This fee will be collected to pay for the cost associated with issuing an additional bill for collection. There is no administrative fee for the normal "split billing" on yearlong allotments.

It is necessary for you to write the bill number on your check prior to submitting it to the lockbox. This is necessary to insure that your payment is credited to your account.

5. Short Age Calf Policy: Any short-aged calves (calves less than 6 months old on December 31) must be removed from the National Forest by April 1, or you will need to apply for and pay grazing fees for these animals from April 1 to the time they are removed from the National Forest. Calves that are 6 months old or older on December 31 need to be paid for starting January 1.

6. Salting and Supplemental Feeding:

- a. Feeding of energy supplements on National Forest land will not be permitted unless a proven need to use the supplements is shown, and a detailed plan is developed and approved.
- b. Feeding of hay on National Forest land will not be permitted unless a proven need to use the supplement is shown, and a detailed plan is developed and approved. All supplemental hay must be **certified weed free** hay and you must provide the proper documentation.
- c. Feeding of vitamin or mineral supplements, protein blocks or molasses licks on National Forest land is permitted when used in the same manner as salt.
- d. Salting practices will be in agreement with the 10-Year Term Grazing Permit. Salt will be placed in areas of available feed to help draw cattle to them. Salt will not be placed within ¼ mile from water and/or in natural concentrations areas which receive heavy grazing use.

V. ALLOTMENT STATUS

The Tennessee Allotment has been analyzed through the NEPA analysis process. The resulting decision updates the allotment management to meet forest plan standards and guidelines. This decision along with the terms of your Ten-Year Term Permit and these Annual Operating Instructions provide direction for management on this allotment.

VI. OTHER ITEMS DISCUSSED

You indicated that you are in favor of Fire Use on your allotment as long as there is another allotment to move your cattle to. Your concerns will be considered when deciding to place a fire into the Fire Use. The District Ranger will authorize necessary changes to this AOI to accommodate fire management.

You completed the PJ push in 2003 and submitted bills for oil and gas \$694.10 charged to push (according to permit modification) but were never reimbursed. I will investigate whether we can reimburse this cost. You mentioned that you would take two drinkers for exchange of the \$694.10.

We discussed travel management status. The first comment analysis has been completed, alternatives have been developed and analyzed and the EIS is expected out sometime in spring of 2011.

You reported problems with woodcutters and that you need to discuss this issue further with the District Ranger.

VII. SPECIAL MANAGEMENT CONCERNS

Keep track of conditions on your allotment and make plans to reduce or remove livestock if vegetative/watershed conditions could be substantially harmed due to continued grazing. The forecast for the upcoming spring is wetter than normal. However, there is no assurance that this precipitation will be effective in filling stocktanks and recharging springs.

VIII. UTILIZATION MONITORING OF KEY AREAS

Monitoring schedule for 2011

Pasture	Monitoring Date	Allowable Use	Key Area
Pipe	09/15	Conservative (31 – 40%)	C1
West	09/15	Conservative (31 – 40%)	C2, C1
East	09/15	Conservative (31 – 40%)	C2a, P2

Monitoring of herbaceous forage will be conducted by ocular estimate of use within a pasture (utilization mapping). Verification of ocular estimates will be conducted using common methodology such as weigh/clip, grazed plant numbers, or stubble height. Grazing use will be described and mapped in the following utilization categories.

Qualitative Grazing Intensity Category	Use of Forage by Weight	Qualitative Indicators of Grazing Intensity
Light to no-use	< 30%	Only choice plants and areas show use: there is no use of poor forage plants.
Conservative	31-40%	Choice forage plants have abundant seed stalks: Areas more than a mile from water show little use: About on third to one half of primary forage plants show grazing on key areas.
Moderate	41-50%	Most of accessible range shows use: Key areas show patch appearance with one half to two thirds of primary forage plants showing use: Grazing is noticeable in zone 1-1.5 miles from water.
Heavy	51-60%	Nearly all primary forage plants show grazing on key areas: Palatable shrubs show hedging: Key areas show a lack of seed stalks: Grazing is noticeable in areas over 1.5 miles from water.
Severe	61 +%	Key areas show a clipped or mowed appearance (no stubble height): Shrubs are severely hedged: There is evidence of livestock trailing to forage: Areas over 1.5 miles from water lack stubble height.
Holechek, J.L. and D. Galt. 2000. Grazing Intensity Guidelines. Rangelands 22(3), pg 11-14.		

If the utilization guideline for the pasture is exceeded on 30% or more of the pasture in any year, livestock will be immediately removed from the pasture. Within a pasture, areas found to exceed allowable use will become key areas for monitoring the following year. The AOI for the next year will be adjusted to correct livestock management practices (distribution, number, timing, salt and water availability, etc.) that may have led to the overuse.

In the event that 30 percent or more of the pasture exceeds the set allowable use in a grazing year, that area will be required to be less than or equal to allowable use the next year. If that same area, or a substantial portion of the same area, exceeds allowable use in two consecutive grazing years, the entire pasture will be rested for one calendar year and stocking will be adjusted to balance with forage supplies. If the same area of a pasture exceeds allowable use in two years out of five, the stocking rate and management plan will be adjusted to balance with forage supply.

Monitoring of utilization for woody riparian species will be conducted on a reach basis in identified riparian areas (see table below).

Pasture	Reach description	Management	Allowable Use
East	Tennessee Creek area	To be grazed only during the dormant season.	20% by grazed-ungrazed plant method.
Pipe	N. Fork Mule Creek Spring	Used with pasture. GPS existing fence and spring location	conservative

If allowable use is exceeded on 30% or more of the riparian reach within the pasture, livestock will be removed from the pasture. If that same reach (or a substantial portion of the same reach) exceeds allowable use in two consecutive grazing years, the entire pasture will be rested for one calendar year and stocking will be adjusted to prevent overuse of the riparian reach. If the same reach of a pasture exceeds allowable use in two years out of five, the stocking rate and management plan will be adjusted to prevent overuse of the riparian reach.

If unforeseen operational conditions require a change in the management specified in this AOI please contact rangeland management personnel at the Glenwood Ranger District to obtain approval of change(s). Advanced notice of change is requested so that field inspections can be conducted. Verbal approval of changes will be followed with a letter documenting the change. Failure to follow the instructions provided in this AOI, or other instructions (verbal or written) of a Forest Officer may lead to adverse action against your Term Grazing Permit (Part 1, Section 3 of your Term Grazing Permit).
