SALT CREEK C&H ALLOTMENT
 2010 ANNUAL OPERATING INSTRUCTIONS

A. Before Entering the Allotment

1. Review all clauses of your term grazing permit and the information contained within these Annual Operating Instructions. Be sure to ask questions if any portion of your grazing permit or these operating instructions is not clearly understood.
2. The current year's grazing fees will be paid before the opening date of the grazing season.
3. Where applicable, regulations for ear tagging (for counting purposes) will be adhered to. All ear tags will be readable and consecutively numbered, with no duplicate numbers. The permittee will inform the Forest Officer administering the grazing permit of the date and number of livestock entering the National Forest and will provide for having the animals counted by a Forest Officer prior to or as the animals enter the allotment.

B. Entering the Allotment

1. The opening date for the allotment is scheduled for **June 16th**. Unless notified by a Forest Officer that a delay will be necessary to allow for further forage development, you may plan to place livestock on the allotment on the entry date shown on your 2010 Bill for Collection.

C. Permitted numbers and Pasture Rotation

1. Permitted Numbers

Permittee	2010 Authorized Numbers	Authorized Date on-off
Joseph W. Holden	299 c/c 10 horses	6/16-10/15 6/16-10/15
Frank Schmidt	125 c/c 2 horses	6/16-10/15 6/16-10/15

2. Planned Pasture Rotation (2010)

Pasture Sequence	Pasture	on-off date	No. Days
1	Upper Beef		
2	Upper Cabin Lower Cabin/Lower Salt Creek		
3	Big Spring		
4	East Willet		
5	West Willet		
6	Ski Area/Upper Salt Creek		
7	Lower Beef		

D. Allowable Use Guidelines

The actual turn on date will be dependent upon range readiness and moves between pastures will be dependent upon **forage utilization**. The stubble height guidelines contained in the Bighorn National Forest Vegetation Grazing Guidelines document will be followed. The allowable use guidelines for utilization of the current year's growth by livestock and wildlife combined during the grazing season will be as follows:

- | | |
|--------------------------------|--|
| Upland Range
Sites----- | <p>A. Maximum of 40% of current year's growth in <u>first</u> used pastures. (Prior to August 1).</p> <p>B. Maximum of 50% of current year's growth in all other pastures. (After August 1).</p> |
| Riparian Range
Sites----- | <p>A. Average 5" inch (using longest leaf length measure) stubble height on wide leaved carex species remaining if livestock leave a pasture prior to August 1.*</p> <p>B. Average 7" inch (using longest leaf length measure) stubble height on wide leaf carex species remaining if livestock leave a pasture after August 1.*</p> |
| Aspen and
Cottonwood Stands | <p>A. Average 4" inch stubble height of all grass species within boundaries of aspen or cottonwood stands when livestock leave the pasture.</p> |

*All stubble height guidelines stated above are the minimum required when transect

measurements record the longest leaf length of all leaves readily available for livestock grazing for each plant measured. Leaves tramped in the mud, protected by willows, or otherwise unavailable to be grazed are not included in the measurements.

Livestock should be moved to the next pasture or off the National Forest, if in the last pasture, when further use will exceed the stated allowable use. It is your responsibility to manage your livestock within each pasture to assure these guidelines are not exceeded. This will require frequent monitoring of the vegetation by you and /or your allotment rider and not making pasture moves based on calendar dates.

It is important to note that the allowable use guidelines shown above apply to all suitable range within the allotment. To assist you with your responsibilities of monitoring the actual use, all monitoring measurements will be done using a key area concept. The key areas are generally those areas livestock have the tendency to graze first when placed in a pasture. In most cases, the key areas will include both riparian and upland range sites. It is very important to keep close watch on all range sites within the key area and plan livestock moves when use is nearing the guideline on either the upland or riparian sites.

Permittee collection and submission of carex stubble height data is voluntary but requested by this office. Permittee monitoring program is designed to give permittees a trigger point to help determine when livestock should be removed from a pasture. You are still responsible to manage your livestock to assure that allowable use guidelines are met in all areas of the allotment. I strongly encourage you to continue to complete stubble height monitoring in all key areas with riparian plant communities, to assure actual use does not go beyond the guidelines stated above. I have enclosed copies of the data forms for your use should you decide to continue your monitoring. Any forms voluntarily submitted to our office will be placed in the allotment monitoring folder.

Permittee collection and submission of carex stubble height data is voluntary but requested by this office. Permittee monitoring program is designed to give permittees a trigger point to help determine when livestock should be removed from a pasture. I have enclosed copies of the data forms for your use should you decide to continue your monitoring. Any forms voluntarily submitted to our office will be placed in the allotment monitoring folder.

E. Key Areas

Key areas serve as monitoring and evaluation points for the degree of grazing use. Properly selected key areas give an indication of the overall acceptability of current grazing management to meet all resource objectives. Following is a list of key areas for each pasture. These areas may be moved or redefined in future years if monitoring results indicate a change is necessary.

Lower Beef: Bull Springs and Grouse Creek Riparian (Lower 1/2 mile).

Upper Beef: The Bowl North of Granite Creek Picnic Grounds, riparian and Aspen sites

Lower Cabin: The area from the junction of Forest Road 17 and Highway 14 north 1/2 mile then east to the Cabin Creek Trailer Park.

Upper Cabin: The area including aspen and riparian north of Cabin Creek and east of the Cabin Creek Trailer Park.

Salt Creek: The bowl including aspen and riparian adjacent to Salt Creek.

Ski Area: Riparian associated with Granite Creek and tributaries east of the Ski area.

Big Spring: Riparian area south central portion of pasture and wet area in southwest corner of pasture.

East Willett: Riparian areas associated with Willett Creek and side drainage north to Woodchuck Pass

West Willett: The riparian area associated with Granite Creek in the southwest corner of the pasture between the Moncrief Horse Pasture and Allotment Boundary fence and west down stream to the Ski area pasture fence.

F. Maintenance of Improvements

Part 2, Clause 8(i) of your term grazing permit states "... the permittee will maintain all range improvements, whether private or Government owned, that are assigned for maintenance to standards of repair, orderliness, and safety acceptable to the Forest Service". A complete list of the improvements and designated maintenance responsibility is included in Part 3 of your term grazing permit. **The maintenance of each improvement must be completed prior to the time livestock enter the pasture in which the improvement is located each year or in the case of allotment boundary fences prior to livestock entering the pasture on either side of the fence.** The minimum maintenance required will be as follows:

Springs All tanks are to be level, completely surrounded by dry ground and easily accessible by both cows and calves. The inlet and overflow pipes are to be free of crimps or breaks, completely buried or otherwise protected from livestock and capable of

delivering water to and away from tanks without any water spilling in the immediate vicinity (20-30 ft.) of the tank. Livestock barriers over tanks must be sturdy and all poles and planks must be in good condition and nailed/bolted in place.

Wire Fences: Fences are to be in an upright, vertical position with all broken wires repaired, wires tight and properly spaced and all corner posts, braces, line posts, steel posts, stays, loops, staples, etc. replaced as needed. Gates are to be tight enough to prevent sagging but must be able to be easily opened and closed by the general public.

Buck and Pole Fences: Fences must be in an upright, serviceable position. Bucks that are spreading and lowering the overall height of the fence must be stabilized with a bottom brace or replaced. All poles must be nailed to bucks and all broken or rotting poles and bucks are to be replaced.

G. Planned Range Improvement Projects:

1. Forest Service and permittees fused a portion of Grouse Creek Pipeline #404113 (a.k.a. Upper Beef pipeline), additional fusing will be needed on the pipeline.
2. Look at reconstructing fence # 404002 in Lower Beef pasture.
3. Look at fence #404063 on upper end for maintenance or reconstruction. Fence allotment boundary fence between Upper Cabin Pasture and Shell Creek Allotment.
4. Maintain electric fence to keep cattle from coming back from the Willett pastures to the Big Spring pasture.

H. General:

1. The attached allotment use form should be completed at the end of the grazing season and returned to this office no later than October 30.
2. The permittees and their employees will do all in their power to prevent and suppress fires on or in the vicinity of the National Forest and to report promptly all fires that they may discover which they cannot suppress.
3. All livestock carcasses are to be moved at least 100 feet from the high water line of streams and lakes, springs, and out of view of roads, trails, recreation sites, and areas of concentrated public use.

4. Horses to be used on the allotment and kept in the horse pastures will be charged at the same rate as cattle. These horses will be broke and usable, for use in the management of this allotment. Application for horse use will be made each year prior to the beginning of the grazing season.

I. Salting Practices:

Salt can be used as a good management tool to help you achieve proper utilization. The following are guidelines that should be used when placing salt on your allotment.

1. Scatter salt in its proper location prior to livestock entering the pasture.
2. Salt should be placed between water developments and at least 1/4 mile from water if at all possible. Salting near water just encourages cattle to stay nearby and should not be practiced.
3. Salt away from small parks, trails, roads and areas of concentrated public use. Salt should be placed in areas of rock outcrops, mature timber (other than aspen), or areas of dense sagebrush where the general public will not easily see it. Do not salt in aspen stands.
4. Change your salt location at least every year and preferably, every time salt is placed within a pasture. Moving salt blocks 50-100 feet can prevent an area from becoming abused from salt placement year after year.
5. Remove salt from an area when proper use is reached. (Note: If you cannot prevent livestock from continuing to utilize the area, it will be necessary to move to the next pasture.)
