

Management Area 1 - Frank Church—River of No Return Wilderness, 782,255 acres: Management will follow the Frank Church—River of No Return Wilderness Management Plan (1985).

Management Area 2 - Seafoam, 37,684 acres: Management will emphasize dispersed recreation, minerals activities, and maintenance of water quality. An estimated 5,325 acres of suitable Douglas-fir will be managed for timber production. No harvest is planned in the first decade. The character of the land will remain essentially unchanged.

Management Area 3 - Marsh Creek, 73,871 acres: Management will emphasize dispersed recreation, and enhancement of anadromous fish habitat and maintenance of water quality. Wildlife habitat will be managed to maintain current capabilities for deer and elk. Suitable range will be maintained in satisfactory condition. Approximately 5,400 acres of Douglas-fir and lodgepole pine will be managed for timber production. An estimated 500 acres of suitable timberland will be harvested during the first decade, requiring approximately 1.3 miles of new road construction. The character of the land will remain essentially undeveloped.

Management Area 4 - Valley Creek, 13,682 acres: Management will emphasize dispersed recreation, maintenance of water quality, and enhancement of anadromous fish habitat. Wildlife habitat will be managed to maintain current capabilities for deer and elk. Suitable range will be maintained in satisfactory condition. Approximately 2,185 acres of Douglas-fir and lodgepole pine will be managed for timber production. No timber will be harvested during the first decade. The management area will remain essentially undeveloped.

Management Area 5 - Basin Creek, 43,923 acres: Management will emphasize dispersed recreation, enhancement of anadromous fish habitat, and maintenance of water quality. Wildlife habitat will be managed to maintain current capabilities for deer and elk. Suitable range will be maintained in satisfactory condition. Approximately 6,900 acres of Douglas-fir and lodgepole pine will be managed for timber production. Approximately 170 acres of Douglas-fir and lodgepole pine will be harvested during the first decade requiring approximately 0.8 miles of new road construction. The character of the land will remain essentially unchanged. Recognize high livestock and mineral potential.

Management Area 6 - Yankee Fork, 121,137 acres: Management will emphasize recreation, minerals activities, timber production, and enhancement of anadromous fish habitat. Wildlife habitat will be maintained in satisfactory condition. Cultural and historic sites will be protected and preserved. Approximately 13,800 acres of Douglas-fir and lodgepole pine will be managed for timber production. Approximately 615 acres of Douglas-fir and lodgepole pine will be harvested during the first decade requiring approximately 1.8 miles of new road construction.

Management Area 7 - East Fork, 84,135 acres: Management will emphasize dispersed recreation, range administration, and enhancement of fish and wildlife habitat. Water quality will be improved and maintained. Approximately 2,100 acres of Douglas-fir will be managed for timber production. No timber will be harvested during the first decade. The management area will remain essentially undeveloped.

Management Area 8 - Thompson Creek, 30,007 acres: Management will emphasize enhancement of wildlife habitat, minerals activities, and dispersed recreation. Habitat conditions and diversity for elk, mule deer, bighorn sheep and mountain goat will be improved and maintained. Approximately 1,350 acres of Douglas-fir and lodgepole pine will be managed for timber production. No timber harvest is scheduled during the first decade.

Management Area 9 - Squaw Creek, 38,749 acres: Management will emphasize enhancement of fish and wildlife habitat, range administration, maintenance of water quality, timber production, and dispersed recreation. Approximately 6,335 acres of Douglas-fir and lodgepole pine will be managed for timber production. An estimated 375 acres of suitable timber will be harvested during the first decade, requiring approximately 1.0 miles of new road construction. The character of the land will remain essentially unchanged.

Management Area 10 - Bayhorse, 21,009 acres: Management will emphasize dispersed recreation, range administration, and maintenance of water quality. Habitat conditions and diversity for elk, mule deer, bighorn sheep and mountain goat will be improved and maintained. Suitable range will be maintained in satisfactory condition. Approximately 1,800 acres of Douglas-fir will be managed for commercial timber production. No timber harvest is scheduled during the first decade.

Management Area 13 - Garden Creek, 11,303 acres: Management will emphasize protection of the municipal watershed, range administration, and maintenance of water quality. Approximately 1,400 acres of Douglas-fir and lodgepole pine will be managed for timber production. An estimated 190 acres of timber harvest is scheduled during the first decade, requiring approximately a half mile of new road construction. The management area will remain essentially unchanged.

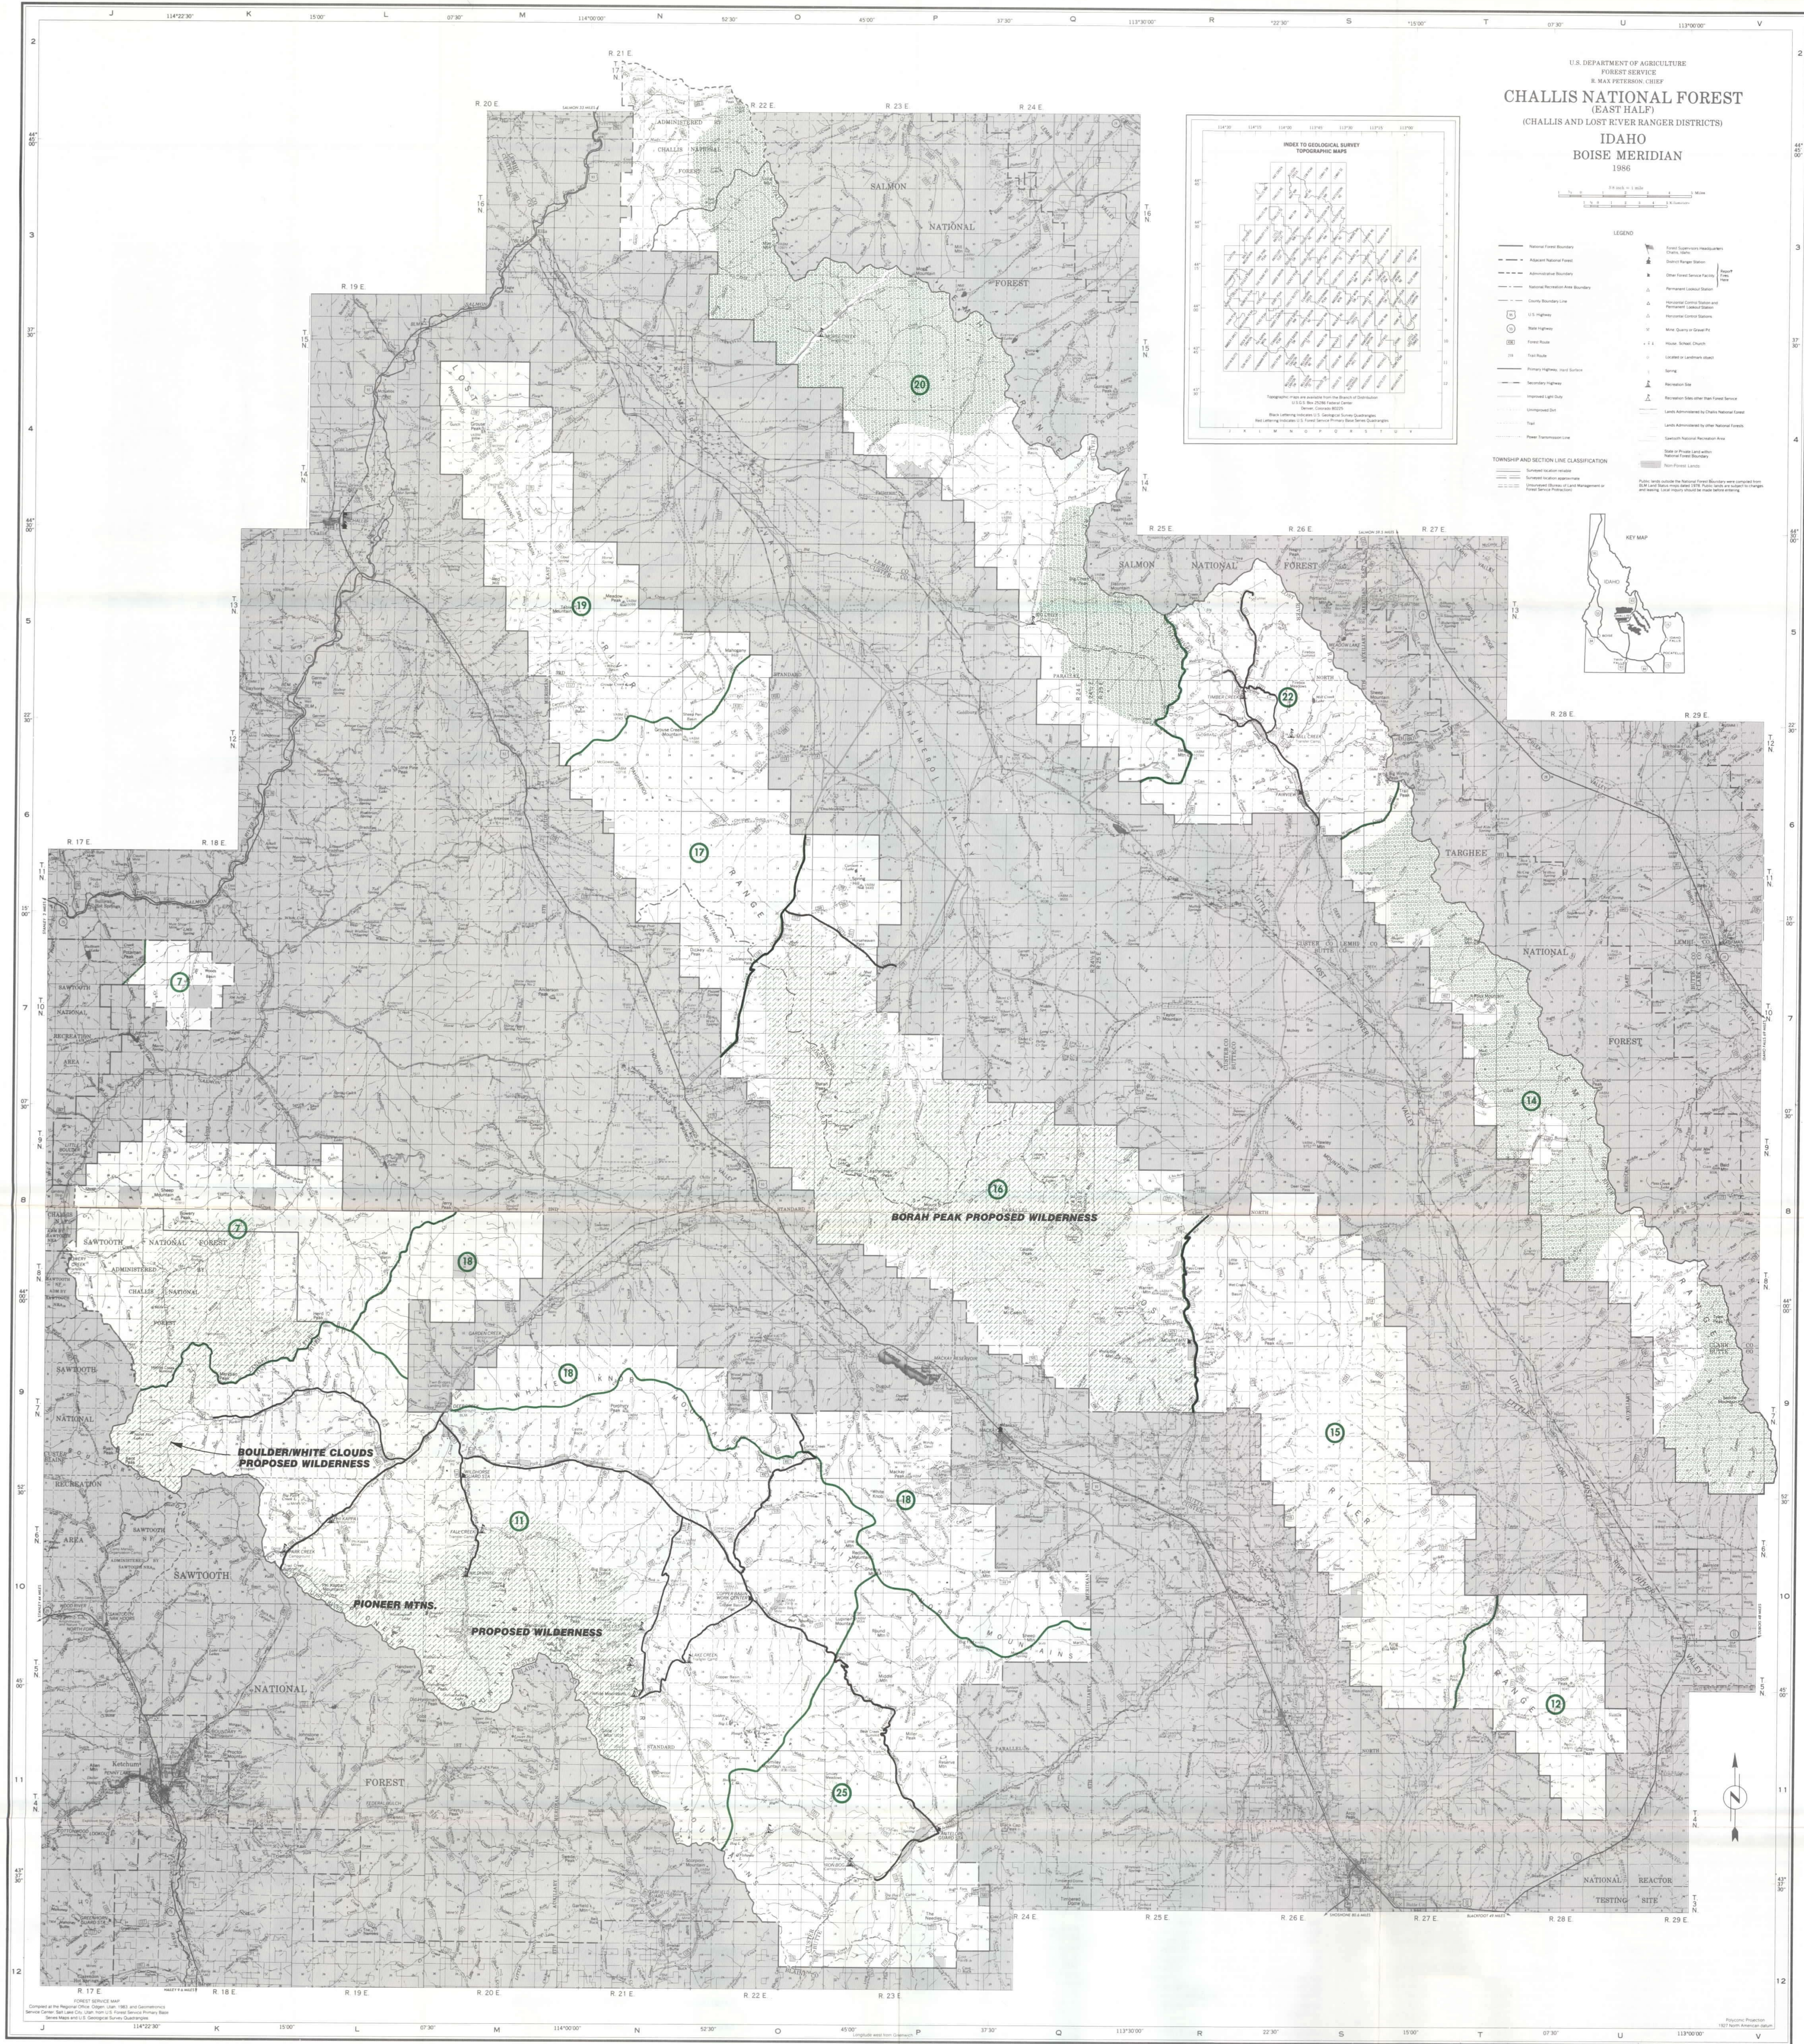

Management Area 21 - Challis Creek, 126, 238 acres: Management will emphasize timber production, range administration, and maintenance of water quality. Wildlife habitat will be managed to maintain current capabilities. Approximately 12,550 acres of Douglas-fir and lodgepole pine will be managed for commercial timber production. An estimated 2,200 acres of suitable timberland will be harvested during the first decade, requiring approximately 6 miles of new road construction.

Management Area 23 - Furnace Creek, 13,975 acres: Management will emphasize enhancement of wildlife habitat and maintenance of water quality. Approximately 1,780 acres of Douglas-fir will be managed for timber production. No timber harvest is scheduled during the 10-year planning period. The management area will remain essentially undeveloped.

Management Area 24 - Wilderness Corridors, 9,191 acres: Management will emphasize recreation opportunities related to Wilderness access. No timber will be harvested. The management area will remain essentially undeveloped.

CHALLIS NATIONAL FOREST LAND & RESOURCE MANAGEMENT PLAN SELECTED ALTERNATIVE MAP

Management Area 7 - East Fork, 84,135 acres: Part of the proposed Boulder/White Clouds (26,000 acres) Wilderness area is included in this management area. Management will emphasize dispersed recreation, range administration, and enhancement of fish and wildlife habitat. Water quality will be improved and maintained. Approximately 2,100 acres of Douglas-fir and lodgepole pine will be managed for commercial timber production. No timber will be harvested during the first decade. The management area will remain essentially undeveloped.

Management Area 11 - Pioneers, 245,972 acres: Portions of two proposed wilderness areas are included in this management area: Pioneer Mountains (48,000 acres) and White Clouds (8,000 acres). Management in those areas will emphasize protection of wilderness attributes. Management outside of these areas will emphasize maintenance of water quality, enhancement of fish and wildlife habitat, dispersed recreation opportunities and improving and maintaining suitable range in satisfactory condition. Approximately 700 acres of timber will be harvested during the first decade, requiring approximately 5.8 miles of new road construction. The management area will require acres of Douglas-fir and lodgepole pine will be managed for timber production.

Management Area 12 - Arco Hills, 30,439 acres: Management will emphasize protection of visual quality on slopes facing Highway 93, and enhancement of wildlife habitat. No lands will be managed for timber harvest. Any timber harvested from this management area will be for the direct benefit of other resource activities. Management will allow for oil and gas leasing and exploration. The management area will remain essentially undeveloped.

Management Area 14 - South Lemhi, 79,981 acres: Management will emphasize dispersed recreation, enhancement of wildlife habitat, and timber production. Approximately 2,100 acres of Douglas-fir and lodgepole pine will be managed for commercial timber production. No timber will be harvested during the first decade. The management area will remain essentially undeveloped.

Management Area 15 - South Lost River, 105,155 acres: Management will emphasize protection of visual qualities on slopes visible from Highway 93, dispersed recreation, enhancement of wildlife habitat and timber production. Suitable range will be managed in satisfactory condition. Oil and gas leasing will be allowed. Approximately 4,675 acres of Douglas-fir and lodgepole pine will be managed for timber production. An estimated 830 acres of suitable timberland will be harvested during the first decade, requiring approximately 13 miles of new road construction. The character of the land will remain essentially undeveloped.

Management Area 16 - Borah Peak, 156,220 acres: The proposed Borah Peak Wilderness (119,000 acres) lies entirely within this management area. Wilderness attributes of this area will be protected. The remaining land outside the proposed wilderness will emphasize range administration and enhancement of wildlife habitat. Oil and gas leasing and exploration will be allowed outside of the proposed wilderness. Approximately 750 acres of Douglas-fir and lodgepole pine will be managed for timber production. No timber will be harvested during the first decade. The management area will remain essentially undeveloped.

Management Area 17 - Pahsimeroi Mountains, 56,906 acres: Management will emphasize maintenance of wildlife habitat and timber production. Oil and gas leasing and exploration will be allowed. Approximately 3,100 acres of Douglas-fir will be managed for timber production. An estimated 400 acres of suitable timberland will be harvested during the first decade, requiring approximately one-half mile of new road construction. This management area will remain essentially undeveloped.

Management Area 18 - Mackay Front, 81,783 acres: Management will emphasize protection of visual qualities on slopes facing Highway 93, dispersed recreation opportunities, range administration, and enhancement of wildlife habitat. Suitable range will be maintained in satisfactory condition. Approximately 475 acres of Douglas-fir will be managed for timber production. No timber harvest is scheduled during the first decade. The character of the land will remain essentially unchanged.

Management Area 19 - North Pahsimeroi, 65,692 acres: Management will emphasize range administration and protection of visual qualities on slopes visible from Highway 93. Approximately 335 acres of Douglas-fir will be managed for timber production. Timber will not be harvested during the first decade. The management area will remain essentially undeveloped.

Management Area 20 - North Lemhi, 128,362 acres: Management will emphasize dispersed recreation opportunities and enhancement of wildlife habitat. Suitable range will be managed in satisfactory condition. Approximately 385 acres of Douglas-fir and lodgepole pine will be managed for timber production. No timber will be harvested during the first decade. Approximately 75,000 acres will be managed to provide a Semi-primitive non-motorized recreational experience. Oil and gas leasing and exploration will be allowed. The management area will remain essentially undeveloped.

Management Area 22 - Sawmill Canyon, 64,265 acres: Management will emphasize dispersed recreation opportunities, enhancement of wildlife habitat, timber production, and minerals activities. Oil and gas leasing and exploration will be allowed. Suitable range will be managed in satisfactory condition. Approximately 15,340 acres of Douglas-fir and lodgepole pine will be managed for commercial timber production. An estimated 660 acres of suitable timberland will be harvested during the first decade, requiring approximately 2 miles of new road construction.

Management Area 25 - Antelope Creek, 94,249 acres: Management will emphasize enhancement of fish and wildlife habitat, minerals activities, and range administration. Stream and lake habitats will be improved and maintained. Approximately 500 acres of Douglas-fir and lodgepole pine will be managed for commercial timber production. No timber will be harvested during the first decade. The character of the land will remain essentially undeveloped.
