

**2011 ANNUAL OPERATING INSTRUCTIONS
FOR THE
MILL CREEK C&H ALLOTMENT**

INTRODUCTION

These Annual Operating Instructions are a guide for implementing grazing management activities on the **Mill Creek C&H Allotment** for the 2011 grazing season. This plan was developed with participation of the livestock permittees at the Annual Operating Instruction meeting held at the Council Ranger District Office on April 26, 2011. The interdisciplinary resource personnel and livestock permittee who participated in development of this plan was Permittee Rodney Greenwood and Rangeland Management Specialists Andy Bumgarner and Jennifer McMorris.

These instructions are a guideline for grazing management. It is necessary to contact the Forest Service if there are any changes or additions to these instructions through out the grazing season. Refer to Part 2 of your term grazing permit for general terms and conditions which apply to these Annual Operating Instructions.

| Permitted Use | | | |
|----------------------|------------------|--------------------------|----------------------|
| Permittee | Allotment | Livestock Numbers | Season of Use |
| Rodney Greenwood | Mill Creek | 66 cow/calf pairs | 6/1-10/15 |

| 2011 Authorized Use | | | |
|----------------------------|------------------|--------------------------|----------------------|
| Permittee | Allotment | Livestock Numbers | Season of Use |
| Rodney Greenwood | Mill Creek | 66 cow/calf pairs | 5/16-9/30 |
| | State Lease | 32 cow/calf pairs | |

Permitted Livestock Brands

Permitted Pack & Saddle Stock

COMPLIANCE

This AOI is made part of the Term Grazing Permit consistent with Part 1, item 3, and Part 2, item 8(a). Situations may develop during the grazing seasons which require changes to these instructions. If this becomes necessary, or if you cannot comply with some part of these instructions, contact the District Ranger and obtain approval before initiating changes or deviating from these instructions. The season of

use is especially dependent upon weather conditions (annual precipitation) which influences annual forage production and range readiness. The District Ranger's authority to modify term grazing permitted use is further described in Part 2, Section 8 (b) & (c) of your permit.

Refer to your term grazing permit, part 2 (general terms and conditions) and part 3 (special terms and conditions) for a list of general and specific management practices required by the permittee.

All livestock feed or straw brought on to the forest is required to be certified weed free.

PREVIOUS YEAR GRAZING RESULTS

| 2010 Grazing Rotation | | | |
|------------------------------|---------------|--------------------------|----------------------|
| Permittee | Unit | Livestock Numbers | Season of Use |
| Rodney Greenwood | Peck Mountain | 66 cow/calf pairs | 5/16-6/30 |
| | Middle | | 7/1-7/21 |
| | Summit | | 7/22-7/31 |
| | West Mill | | 8/1-9/30 |

BILLING

Grazing fees of \$ 1.35/HM must be paid before livestock are authorized to enter the National Forest. Payment must be made to: USDA Forest Service, c/o Citibank, P.O. Box 301550, Los Angeles, California 90030-1550. The Council District Office must receive confirmation from the Citibank Lockbox that payment has been made prior to cattle entering the Forest.

LIVESTOCK MANAGEMENT

| 2011 Grazing Rotation | | | |
|------------------------------|---------------|--------------------------|----------------------|
| Permittee | Unit | Livestock Numbers | Season of Use |
| Rodney Greenwood | Peck Mountain | 66 cow/calf pairs | 5/16-6/30 |
| | Middle | | 7/1-7/21 |
| | West Mill | | 7/22-9/15 |
| | Summit | | 9/16-9/30 |

The season of use dates are tentative and may vary according to range conditions and utilization levels within the pastures. Pasture move dates will vary and may be shortened or extended as conditions warrant.

There have been known populations of the ESA listed Threatened Northern Idaho Ground Squirrel (NIDGS) located on the Mill Creek Allotment in the Peck Mountain and Middle Units in the past, however there are no known populations at this time. No further mitigation of livestock grazing effects is anticipated due to the lack of NIDGS presence. Should a population of NIDGS return; more specific livestock grazing mitigation measures will be developed.

In the event a designated mitigation measure fails to protect a species listed under the Endangered Species Act, a change in the authorized grazing activity will occur. If proper utilization levels are reached, then livestock will be moved to the next grazing area or off the forest. If livestock grazing does

not comply with the terms and conditions of these Annual Operating Instructions, then the Forest Service policy and procedures dealing with administrative permit actions will be followed.

Notify the Forest Service at least 5 days before you turn onto the allotment of when and where turnout will occur so that a count can be made if desired.

STANDARDS AND GUIDES

The following are specific utilization standards and guidelines from the July 2003 Forest Plan. Utilization percentages are by weight and are the maximum allowed.

RAST01 - Maximum forage utilization of representative areas within each pasture shall not exceed the values shown at the end of the growing season. Variation in utilization standards in order to achieve specific vegetative management objectives shall occur with a site-specific or project-level decision according to direction in FSM 1922.5.

- a) Riparian Areas: Maximum 45 percent use or retain a minimum 4 inch stubble height of hydric greenline species, whichever occurs first.
- b) Upland Vegetative Cover Types: Early season or season long pastures – 40 percent use. Vegetative slow growth, after seed ripe conditions, or late season pastures – 50 percent use.

IMPROVEMENTS

All range improvements must be maintained prior to turning livestock into the unit scheduled for use. If an existing range improvement has been properly maintained but requires reconstruction, a cooperative effort can be made between the Forest Service and permittee to reconstruct the development, depending on material availability. Those projects to which the permittee contributes normally receive higher priority for funding by the Forest Service.

Maintenance of spring developments is vitally important to the health of your livestock and to the grazing allotment. If you are aware of spring developments that require reconstruction or extensive maintenance, please discuss this with your Rangeland Management Specialist.

Peck Mountain Spring needs a new trough. The Permittee and either Jennifer or Andy will go look at the spring this summer to determine maintenance needs.

For a list of assigned maintenance of structural improvements as well as maintenance standards see part 3 of your term grazing permit.

PERMITTEE/RIDER INSTRUCTIONS

Part of good cattle management is riding to assure proper cattle distribution. In particular we want to insure that the stream banks and meadows aren't over used. These riparian areas are considered key areas and will be monitored. When an area has reached maximum allowable use levels cattle will be removed from that area and kept from returning. Keeping cattle off select areas and in areas of less use serves to prolong the time cattle can expect to stay in an area.

If cattle are in the final area of the rotation sequence and utilization standards are reached, then they will have to be removed from the allotment.

Livestock in units outside the season of use or on an allotment other than the one permitted, is a violation of the terms and conditions of the Term Grazing Permit.

Salting

Salting is restricted to the following:

- No less than ¼ mile from water, and not be placed in meadow bottoms.
- Placed at a minimum distance of 100 yards from open roads and out of sight from roads if possible.
- Should be moved yearly unless present salt ground is located in a rocky area where no vegetation grows.
- Unconsumed salt will be removed from the site.
- ¼ mile from timber plantations with trees less than 15 feet tall. If this can't be accomplished, the District Range and Reforestation personnel will work with you to find acceptable locations.

REQUIRED REPORTING

We are requesting you to report actual use information for each unit grazed because we are required to report this grazing use to the National Marine Fisheries Service (NMFS) and the US Fish and Wildlife Service (FWS). This information is also very important when conducting future allotment analysis. Any format is acceptable. If you would like a Forest Service form or have any questions about what information to include in the Actual Use Report, please call Andy at 208-253-0114 or 208-549-4262. **Actual Use needs to be turned in no later than December 1, 2011.**

INSPECTIONS AND MONITORING

Turnout will not occur prior to range readiness. Range readiness is measured by soil moisture and plant growth. Soils may be damp but should be firm to avoid excessive compaction due to livestock. Grass species must be a minimum of 6 inches in height. Arrowleaf balsamroot should be in bloom or past bloom.

Allotment/pasture inspections will be performed periodically throughout the grazing season by Forest Service Personnel. Livestock distribution, correct livestock location, numbers and identification, structural improvement maintenance, and utilization levels will be evaluated during these site visits. If you wish to accompany Forest Service Personnel on these inspections please contact the Rangeland Management Specialist.

COORDINATION & COOPERATION

Cooperation with neighboring permittees is encouraged, however if there are problems occurring that cannot be settled let your Rangeland Management Specialist know so that steps can be taken to correct the problems.

There is one active logging operation within the Mill Creek Allotment. The Green Hornet Timber Sale is located mainly within the West Mill Creek Pasture. This sale is active and the logging has been completed. This summer they will be finishing up the contract by completing the slash work.

If you would like a map of the current timber sale in your area let your Rangeland Management Specialist know and he can provide one for you.

Please review the AOI for consistency with our discussion at the annual meeting, if correct sign and return it to Andy.
