

APPENDIX D
LABORATORY ANALYTICAL REPORTS

July 18, 2008

Analytical Report for Service Request No: K0805778

Christina Wheeler
URS Corporation
111 SW Columbia
Suite 1500
Portland, OR 97201-5850

RE: Blue Ledge Mine

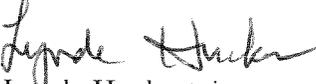

Dear Christina:

Enclosed are the results of the samples submitted to our laboratory on June 26, 2008. For your reference, these analyses have been assigned our service request number K0805778.

All analyses were performed according to our laboratory's quality assurance program. Where applicable, the methods cited conform to the Methods Update Rule (effective 4/11/2007), which relates to the use of analytical methods for the drinking water and waste water programs. The test results meet requirements of the NELAC standards. Exceptions are noted in the case narrative report where applicable. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please call if you have any questions. My extension is 3358. You may also contact me via Email at LHuckestein@caslab.com.

Respectfully submitted,

Columbia Analytical Services, Inc.

Lynda Huckestein
Client Services Manager

Acronyms

ASTM	American Society for Testing and Materials
A2LA	American Association for Laboratory Accreditation
CARB	California Air Resources Board
CAS Number	Chemical Abstract Service registry Number
CFC	Chlorofluorocarbon
CFU	Colony-Forming Unit
DEC	Department of Environmental Conservation
DEQ	Department of Environmental Quality
DHS	Department of Health Services
DOE	Department of Ecology
DOH	Department of Health
EPA	U. S. Environmental Protection Agency
ELAP	Environmental Laboratory Accreditation Program
GC	Gas Chromatography
GC/MS	Gas Chromatography/Mass Spectrometry
LUFT	Leaking Underground Fuel Tank
M	Modified
MCL	Maximum Contaminant Level is the highest permissible concentration of a substance allowed in drinking water as established by the USEPA.
MDL	Method Detection Limit
MPN	Most Probable Number
MRL	Method Reporting Limit
NA	Not Applicable
NC	Not Calculated
NCASI	National Council of the Paper Industry for Air and Stream Improvement
ND	Not Detected
NIOSH	National Institute for Occupational Safety and Health
PQL	Practical Quantitation Limit
RCRA	Resource Conservation and Recovery Act
SIM	Selected Ion Monitoring
TPH	Total Petroleum Hydrocarbons
tr	Trace level is the concentration of an analyte that is less than the PQL but greater than or equal to the MDL.

Inorganic Data Qualifiers

- * The result is an outlier. See case narrative.
- # The control limit criteria is not applicable. See case narrative.
- B The analyte was found in the associated method blank at a level that is significant relative to the sample result.
- E The result is an estimate amount because the value exceeded the instrument calibration range.
- J The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.
- U The compound was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.
 - i The MRL/MDL has been elevated due to a matrix interference.
- X See case narrative.

Metals Data Qualifiers

- # The control limit criteria is not applicable. See case narrative.
- B The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.
- E The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
- M The duplicate injection precision was not met.
- N The Matrix Spike sample recovery is not within control limits. See case narrative.
- S The reported value was determined by the Method of Standard Additions (MSA).
- U The compound was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.
- W The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
 - i The MRL/MDL has been elevated due to a matrix interference.
- X See case narrative.
- * The duplicate analysis not within control limits. See case narrative.
- + The correlation coefficient for the MSA is less than 0.995.

Organic Data Qualifiers

- * The result is an outlier. See case narrative.
- # The control limit criteria is not applicable. See case narrative.
- A A tentatively identified compound, a suspected aldol-condensation product.
- B The analyte was found in the associated method blank at a level that is significant relative to the sample result.
- C The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
- D The reported result is from a dilution.
- E The result is an estimate amount because the value exceeded the instrument calibration range.
- J The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.
- N The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
- P The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results (25% for CLP Pesticides).
- U The compound was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.
 - i The MRL/MDL has been elevated due to a chromatographic interference.
- X See case narrative.

Additional Petroleum Hydrocarbon Specific Qualifiers

- F The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
- L The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
- H The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
- O The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
- Y The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
- Z The chromatographic fingerprint does not resemble a petroleum product.

Case Narrative

COLUMBIA ANALYTICAL SERVICES, INC.

Client: URS Corporation
Project: Blue Ledge Mine
Sample Matrix: Water

Service Request No.: K0805778
Date Received: 6/26/2008

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Additional quality control analyses reported herein include: Laboratory Duplicate (DUP), Matrix Spike (MS), and Laboratory Control Sample (LCS).

Sample Receipt

Eight water samples were received for analysis at Columbia Analytical Services on 6/26/2008. The samples were received in good condition and consistent with the accompanying chain of custody form. The samples were stored in a refrigerator at 4°C upon receipt at the laboratory.

General Chemistry Parameters

No anomalies associated with the analysis of these samples were observed.

Total Metals

Matrix Spike Recovery Exceptions:

The control criteria for matrix spike recovery of Iron for the Batch QC is not applicable. The Iron concentration in the sample was significantly higher than the added spike concentration, preventing accurate evaluation of the spike recovery.

Analytical Report for Service Request No: K0805893

Christina Wheeler
URS Corporation
111 SW Columbia
Suite 1500
Portland, OR 97201-5850

RE: Blue Ledge Mine/25696770.00001

Dear Christina:

Enclosed are the results of the samples submitted to our laboratory on June 30, 2008. For your reference, these analyses have been assigned our service request number K0805893.

All analyses were performed according to our laboratory's quality assurance program. Where applicable, the methods cited conform to the Methods Update Rule (effective 4/11/2007), which relates to the use of analytical methods for the drinking water and waste water programs. The test results meet requirements of the NELAC standards. Exceptions are noted in the case narrative report where applicable. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please call if you have any questions. My extension is 3358. You may also contact me via Email at LHuckestein@caslab.com.

Respectfully submitted,

Columbia Analytical Services, Inc.

Lynda Huckestein
Client Services Manager

Acronyms

ASTM	American Society for Testing and Materials
A2LA	American Association for Laboratory Accreditation
CARB	California Air Resources Board
CAS Number	Chemical Abstract Service registry Number
CFC	Chlorofluorocarbon
CFU	Colony-Forming Unit
DEC	Department of Environmental Conservation
DEQ	Department of Environmental Quality
DHS	Department of Health Services
DOE	Department of Ecology
DOH	Department of Health
EPA	U. S. Environmental Protection Agency
ELAP	Environmental Laboratory Accreditation Program
GC	Gas Chromatography
GC/MS	Gas Chromatography/Mass Spectrometry
LUFT	Leaking Underground Fuel Tank
M	Modified
MCL	Maximum Contaminant Level is the highest permissible concentration of a substance allowed in drinking water as established by the USEPA.
MDL	Method Detection Limit
MPN	Most Probable Number
MRL	Method Reporting Limit
NA	Not Applicable
NC	Not Calculated
NCASI	National Council of the Paper Industry for Air and Stream Improvement
ND	Not Detected
NIOSH	National Institute for Occupational Safety and Health
PQL	Practical Quantitation Limit
RCRA	Resource Conservation and Recovery Act
SIM	Selected Ion Monitoring
TPH	Total Petroleum Hydrocarbons
tr	Trace level is the concentration of an analyte that is less than the PQL but greater than or equal to the MDL.

Inorganic Data Qualifiers

- * The result is an outlier. See case narrative.
- # The control limit criteria is not applicable. See case narrative.
- B The analyte was found in the associated method blank at a level that is significant relative to the sample result.
- E The result is an estimate amount because the value exceeded the instrument calibration range.
- J The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.
- U The compound was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.
- i The MRL/MDL has been elevated due to a matrix interference.
- X See case narrative.

Metals Data Qualifiers

- # The control limit criteria is not applicable. See case narrative.
- B The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.
- E The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
- M The duplicate injection precision was not met.
- N The Matrix Spike sample recovery is not within control limits. See case narrative.
- S The reported value was determined by the Method of Standard Additions (MSA).
- U The compound was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.
- W The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
- i The MRL/MDL has been elevated due to a matrix interference.
- X See case narrative.
- * The duplicate analysis not within control limits. See case narrative.
- + The correlation coefficient for the MSA is less than 0.995.

Organic Data Qualifiers

- * The result is an outlier. See case narrative.
- # The control limit criteria is not applicable. See case narrative.
- A A tentatively identified compound, a suspected aldol-condensation product.
- B The analyte was found in the associated method blank at a level that is significant relative to the sample result.
- C The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
- D The reported result is from a dilution.
- E The result is an estimate amount because the value exceeded the instrument calibration range.
- J The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.
- N The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
- P The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results (25% for CLP Pesticides).
- U The compound was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.
- i The MRL/MDL has been elevated due to a chromatographic interference.
- X See case narrative.

Additional Petroleum Hydrocarbon Specific Qualifiers

- F The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
- L The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
- H The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
- O The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
- Y The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
- Z The chromatographic fingerprint does not resemble a petroleum product.

Requested Report Date

Circle which metals are to be analyzed:

Total Metals: Al As Sb Ba Be B Ca Cd Co Cr Cu Fe Pb Mg Mn Mo Ni K Ag Na Se Sr Ti Sn V Zn Hg
Dissolved Metals: Al As Sb Ba Be B Ca Cd Co Cr Cu Fe Pb Mg Mn Mo Ni K Ag Na Se Sr Ti Sn V Zn Hg

SPECIAL INSTRUCTIONS/COMMENTS:

USE EXTRA VOLUME FOR MS/MSD
250 ml UNPREPARED CONTAINERS + 500 ml H₂O₂ CONTAINERS
TANKS HAVE BEEN FIELD FILTERED (FF).
4 COPIES TOTAL

Cooler Receipt and Preservation Form

PC CH

Client / Project: URS Service Request K08 05843

Received: 6/30/08 Opened: 6/30/08 By: K. Smith

1. Samples were received via? US Mail Fed Ex UPS DHL GH GS PDX Courier Hand Delivered
2. Samples were received in: (circle) Cooler Box Envelope Other _____ NA
3. Were custody seals on coolers? NA Y N If yes, how many and where? _____
If present, were custody seals intact? Y N If present, were they signed and dated? _____
4. Is shipper's air-bill filed? If not, record air-bill number: _____ NA Y N
5. Temperature of cooler(s) upon receipt (°C): 6.5C 1.0C 7.4C 7.0C
Temperature Blank (°C): 5.9C 6.4C 6.4C 6.5C
6. If applicable, list Chain of Custody Numbers: _____
7. Were custody papers properly filled out (ink, signed, etc.)? NA Y N
8. Packing material used. Inserts Baggies Bubble Wrap Gel Packs Wet Ice Sleeves Other _____
9. Did all bottles arrive in good condition (unbroken)? *Indicate in the table below.* NA Y N
10. Were all sample labels complete (i.e analysis, preservation, etc.)? Y N
11. Did all sample labels and tags agree with custody papers? *Indicate in the table below* Y N
12. Were appropriate bottles/containers and volumes received for the tests indicated? NA Y N
13. Were the pH-preserved bottles tested* received at the appropriate pH? *Indicate in the table below* NA Y N
14. Were VOA vials and 1631 Mercury bottles received without headspace? *Indicate in the table below.* NA Y N
15. Are CWA Microbiology samples received with >1/2 the 24hr. hold time remaining from collection? NA Y N
16. Was C12/Res negative? NA Y N

Sample ID on Bottle	Sample ID on COC	Sample ID on Bottle	Sample ID on COC

Sample ID	Bottle Count	Bottle Type	Out of Temp	Head-space	Broken	pH	Reagent	Volume added	Reagent Lot Number	Initials

*Does not include all pH preserved sample aliquots received. See sample receiving SOP (SMO-GEN)

Analytical Report for Service Request No: K0805944

Christina Wheeler
URS Corporation
111 SW Columbia
Suite 1500
Portland, OR 97201-5850

RE: Blue Ledge Mine/25696770.00001

Dear Christina:

Enclosed are the results of the samples submitted to our laboratory on July 01, 2008. For your reference, these analyses have been assigned our service request number K0805944.

All analyses were performed according to our laboratory's quality assurance program. Where applicable, the methods cited conform to the Methods Update Rule (effective 4/11/2007), which relates to the use of analytical methods for the drinking water and waste water programs. The test results meet requirements of the NELAC standards. Exceptions are noted in the case narrative report where applicable. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please call if you have any questions. My extension is 3358. You may also contact me via Email at LHuckestein@caslab.com.

Respectfully submitted,

Columbia Analytical Services, Inc.

Lynda Huckestein
Client Services Manager

LH/lb

LUFT	Leaking Underground Fuel Tank
M	Modified
MCL	Maximum Contaminant Level is the highest permissible concentration of a substance allowed in drinking water as established by the USEPA.
MDL	Method Detection Limit
MPN	Most Probable Number
MRL	Method Reporting Limit
NA	Not Applicable
NC	Not Calculated
NCASI	National Council of the Paper Industry for Air and Stream Improvement
ND	Not Detected
NIOSH	National Institute for Occupational Safety and Health
PQL	Practical Quantitation Limit
RCRA	Resource Conservation and Recovery Act
SIM	Selected Ion Monitoring
TPH	Total Petroleum Hydrocarbons
tr	Trace level is the concentration of an analyte that is less than the PQL but greater than or equal to the MDL.

Inorganic Data Qualifiers

- * The result is an outlier. See case narrative.
- # The control limit criteria is not applicable. See case narrative.
- B The analyte was found in the associated method blank at a level that is significant relative to the sample result.
- E The result is an estimate amount because the value exceeded the instrument calibration range.
- J The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.
- U The compound was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.
- i The MRL/MDL has been elevated due to a matrix interference.
- X See case narrative.

Metals Data Qualifiers

- # The control limit criteria is not applicable. See case narrative.
- B The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.
- E The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
- M The duplicate injection precision was not met.
- N The Matrix Spike sample recovery is not within control limits. See case narrative.
- S The reported value was determined by the Method of Standard Additions (MSA).
- U The compound was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.
- W The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
- i The MRL/MDL has been elevated due to a matrix interference.
- X See case narrative.
- * The duplicate analysis not within control limits. See case narrative.
- + The correlation coefficient for the MSA is less than 0.995.

Organic Data Qualifiers

- * The result is an outlier. See case narrative.
- # The control limit criteria is not applicable. See case narrative.
- A A tentatively identified compound, a suspected aldol-condensation product.
- B The analyte was found in the associated method blank at a level that is significant relative to the sample result.
- C The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
- D The reported result is from a dilution.
- E The result is an estimate amount because the value exceeded the instrument calibration range.
- J The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.
- N The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
- P The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results (25% for CLP Pesticides).
- U The compound was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.
- i The MRL/MDL has been elevated due to a chromatographic interference.
- X See case narrative.

Additional Petroleum Hydrocarbon Specific Qualifiers

- F The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
- L The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
- H The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
- O The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
- Y The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
- Z The chromatographic fingerprint does not resemble a petroleum product.

Case Narrative

COLUMBIA ANALYTICAL SERVICES, INC.

Client: URS Corporation
Project: Blue Ledge Mine
Sample Matrix: Sediment

Service Request No.: K0805944
Date Received: 7/1/2008

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Additional quality control analyses reported herein include: Laboratory Duplicate (DUP), Matrix Spike (MS), and Laboratory Control Sample (LCS).

Sample Receipt

Thirty seven sediment samples were received for analysis at Columbia Analytical Services on 7/1/2008. The samples were received in good condition and consistent with the accompanying chain of custody form. The samples were stored in a refrigerator at 4°C upon receipt at the laboratory.

General Chemistry Parameters

No anomalies associated with the analysis of these samples were observed.

Total Metals

Matrix Spike Recovery Exceptions:

The control criteria for matrix spike recoveries of Iron for samples EC-07-RS-080625-URS, JC-08-SD-080626-URS, and JC-12-SD-080627-URS are not applicable. The analyte concentration in the samples was significantly higher than the added spike concentration, preventing accurate evaluation of the spike recoveries.

Relative Percent Difference Exceptions:

The Relative Percent Difference (RPD) for the replicate analysis of Arsenic in sample JC-08-SD-080626-URS was outside the normal CAS control limits. The variability in the results is attributed to the heterogeneous character of the sample. Standard mixing techniques were used, but were not sufficient for complete homogenization of this sample.

The control criteria for matrix spike recovery of Lead for sample JC-12-SD-080627-URS is not applicable. The analyte concentration in the sample was significantly higher than the added spike concentration, preventing accurate evaluation of the spike recovery.

Analytical Report for Service Request No: K0806006

Christina Wheeler
URS Corporation
111 SW Columbia
Suite 1500
Portland, OR 97201-5850

RE: Blue Ledge Mine/25696770.00001

Dear Christina:

Enclosed are the results of the samples submitted to our laboratory on July 02, 2008. For your reference, these analyses have been assigned our service request number K0806006.

All analyses were performed according to our laboratory's quality assurance program. Where applicable, the methods cited conform to the Methods Update Rule (effective 4/11/2007), which relates to the use of analytical methods for the drinking water and waste water programs. The test results meet requirements of the NELAC standards. Exceptions are noted in the case narrative report where applicable. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please call if you have any questions. My extension is 3358. You may also contact me via Email at LHuckestein@caslab.com.

Respectfully submitted,

Columbia Analytical Services, Inc.

Lynda Huckestein
Client Services Manager

LH/ll

DOH	Department of Health
EPA	U. S. Environmental Protection Agency
ELAP	Environmental Laboratory Accreditation Program
GC	Gas Chromatography
GC/MS	Gas Chromatography/Mass Spectrometry
LUFT	Leaking Underground Fuel Tank
M	Modified
MCL	Maximum Contaminant Level is the highest permissible concentration of a substance allowed in drinking water as established by the USEPA.
MDL	Method Detection Limit
MPN	Most Probable Number
MRL	Method Reporting Limit
NA	Not Applicable
NC	Not Calculated
NCASI	National Council of the Paper Industry for Air and Stream Improvement
ND	Not Detected
NIOSH	National Institute for Occupational Safety and Health
PQL	Practical Quantitation Limit
RCRA	Resource Conservation and Recovery Act
SIM	Selected Ion Monitoring
TPH	Total Petroleum Hydrocarbons
tr	Trace level is the concentration of an analyte that is less than the PQL but greater than or equal to the MDL.

Inorganic Data Qualifiers

- * The result is an outlier. See case narrative.
- # The control limit criteria is not applicable. See case narrative.
- B The analyte was found in the associated method blank at a level that is significant relative to the sample result.
- E The result is an estimate amount because the value exceeded the instrument calibration range.
- J The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.
- U The compound was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.
- i The MRL/MDL has been elevated due to a matrix interference.
- X See case narrative.

Metals Data Qualifiers

- # The control limit criteria is not applicable. See case narrative.
- B The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.
- E The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
- M The duplicate injection precision was not met.
- N The Matrix Spike sample recovery is not within control limits. See case narrative.
- S The reported value was determined by the Method of Standard Additions (MSA).
- U The compound was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.
- W The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
- i The MRL/MDL has been elevated due to a matrix interference.
- X See case narrative.
- * The duplicate analysis not within control limits. See case narrative.
- + The correlation coefficient for the MSA is less than 0.995.

Organic Data Qualifiers

- * The result is an outlier. See case narrative.
- # The control limit criteria is not applicable. See case narrative.
- A A tentatively identified compound, a suspected aldol-condensation product.
- B The analyte was found in the associated method blank at a level that is significant relative to the sample result.
- C The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
- D The reported result is from a dilution.
- E The result is an estimate amount because the value exceeded the instrument calibration range.
- J The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.
- N The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
- P The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results (25% for CLP Pesticides).
- U The compound was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.
- i The MRL/MDL has been elevated due to a chromatographic interference.
- X See case narrative.

Additional Petroleum Hydrocarbon Specific Qualifiers

- F The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
- L The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
- H The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
- O The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
- Y The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
- Z The chromatographic fingerprint does not resemble a petroleum product.

Case Narrative

COLUMBIA ANALYTICAL SERVICES, INC.

Client: URS Corporation
Project: Blue Ledge Mine
Sample Matrix: Tissue, Solid, Water

Service Request No.: K0806006
Date Received: 7/2/2008

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Surrogate recoveries have been reported for all applicable organic analyses. Additional quality control analyses reported herein include: Laboratory Duplicate (DUP), Matrix Spike (MS), and Laboratory Control Sample (LCS).

Sample Receipt

Six tissue, five solid and one water sample were received for analysis at Columbia Analytical Services on 7/2/2008. The samples were received in good condition and consistent with the accompanying chain of custody form. The samples were stored in a refrigerator at 4°C upon receipt at the laboratory.

General Chemistry Parameters

No anomalies associated with the analysis of these samples were observed.

SPLP Metals

Matrix Spike Recovery Exceptions:

The control criteria for matrix spike recoveries of Copper and Zinc for sample WRS-1-DUP are not applicable. The analyte concentration in the sample was significantly higher than the added spike concentration, preventing accurate evaluation of the spike recovery.

Total and Dissolved Metals

No anomalies associated with the analysis of these samples were observed.

Analytical Report for Service Request No: K0806006

Christina Wheeler
URS Corporation
111 SW Columbia
Suite 1500
Portland, OR 97201-5850

RE: Blue Ledge Mine/25696770.00001

Dear Christina:

Enclosed are the revised pages for the samples submitted to our laboratory on July 02, 2008. For your reference, these analyses have been assigned our service request number K0806006.

The results have been revised to reflect a wet weight basis.

All analyses were performed according to our laboratory's quality assurance program. Where applicable, the methods cited conform to the Methods Update Rule (effective 4/11/2007), which relates to the use of analytical methods for the drinking water and waste water programs. The test results meet requirements of the NELAC standards. Exceptions are noted in the case narrative report where applicable. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please call if you have any questions. My extension is 3358. You may also contact me via Email at LHuckestein@caslab.com.

Respectfully submitted,

Columbia Analytical Services, Inc.

Lynda Huckestein
Client Services Manager

DATA QUALITY QA/QC REPORT

The data quality review of thirty-three primary water samples, two field duplicate water samples, twenty-four primary sediment samples, two duplicate sediment samples, ten riparian soil samples, one duplicate riparian soil samples, five primary fish tissue samples, one duplicate fish tissue sample, four primary waste rock samples and one duplicate waste rock sample collected as part of the Summer 2008 Field Investigation at the Blue Ledge Mine has been completed. The sampling occurred from June 24th to June 27th, 2008. The samples were submitted to Columbia Analytical Services, Inc (CAS) located in Kelso, Washington. All analyses were performed in general accordance with methods specified in EPA's *Test Methods for Evaluating Solid Waste (SW-846)*, Update IIIB, June 2005 and *Methods for Chemical Analysis of Water and Wastes*, March 1983. Samples were analyzed for one or more of the following parameters:

Method	Analytical Parameter
EPA 6010B/6020	Total and Dissolved Metals ¹
EPA 1312	SPLP Metals ¹
EPA 1311	TCLP Metals ²
SM 2540D	Total Suspended Solids (TSS)
SM 2540C	Total Dissolved Solids (TDS)
EPA 300.0	Sulfate
SM 2340B	Hardness
SM 2320B	Alkalinity
ASTM D422 mod.	Particle Size Determination
Freeze Dry (Tissue) 160.3M (Soil/Sediment)	Percent Solids

¹Arsenic, Cadmium, Copper, Iron, Lead and Zinc

²Arsenic, Barium, Cadmium, Chromium, Lead, Mercury, Selenium and Silver

The project samples were divided into four sample delivery groups (SDGs) and assigned CAS SDG numbers K0805778, K0805893, K0805944 and K0806006. CAS provided data packages for these four SDGs consisting of summarized sample and QC results. The analytical review of this data included the evaluation of hold times, method blanks, surrogate recoveries, laboratory control sample (LCS) results, laboratory and field duplicate results (DUP), and matrix spike/matrix spike duplicate (MS/MSD) results. Additionally verification of the reported electronic data with the hard copy deliverable was reviewed at a frequency of 15% or greater. Specific sample identifications and requested analyses are presented in Table 1. The data were reviewed based on *USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review*, October 2004 and laboratory quality control criteria per the project *Work Plan and Sampling Analysis Plan (WSAP)* (URS, 2008). Data qualifiers assigned to sample results are presented in Table 2 and have been incorporated into the data tables attached to the main body of this report.

The cooler temperatures were recorded as part of the check-in procedure by CAS. Coolers associated with SDG K0805893 were received by the laboratory at temperatures ranging from

DATA QUALITY QA/QC REPORT

6.0°C to 7.0°C, slightly above the EPA recommended temperature range of $4 \pm 2^\circ\text{C}$. The samples were packed into coolers with fresh ice just prior to the lab courier pick-up; therefore, the coolers did not have sufficient time to reach the EPA recommended temperature range. No qualification due to the temperature exceedance was necessary.

INORGANIC ANALYSES

Samples were analyzed for total and dissolved metals, TCLP and SPLP metals by the methods identified in the introduction to this report.

1. Holding Times – Acceptable
2. Blanks – Acceptable with the following exceptions:

Dissolved Metals by EPA Method 6020 – Zinc (dissolved) was detected at 0.10 ug/L in the method blank associated with batch K0805778. All associated sample results were greater than ten times the blank result with the exception of sample AR-01-SW-080624-URS (K0805778-001). This result was qualified as non-detect at the reporting limit, 0.50 U.

Dissolved Metals by EPA Method 6020 – Lead (dissolved) was detected at 0.0009 ug/L in the method blank, MB2, associated with batch K0805893. All associated sample results less than ten times the blank result were qualified as non-detect at the reporting limit, 0.020 U.

Dissolved Metals by EPA Method 6020 – Lead (dissolved), copper (dissolved), and zinc were detected in the method blank associated with batch K0806006. All associated sample results were greater than 10 times the blank concentration, therefore, no qualification was necessary.

3. Laboratory Control Samples (LCS or Blank Spike) – Acceptable
4. Laboratory Duplicate – Acceptable with the following exceptions:

Total Metals by EPA Method 6020 – The relative percent difference (RPD) for arsenic of 36.4% exceeded the laboratory control limit of 20% in the laboratory duplicate analysis of sample JC-08-SD-080626-URS. Upon comparison of physical and chemical results of other samples in the investigation, it was determined that qualification of only the parent sample was required. The arsenic result for the parent sample was qualified as estimated and flagged ‘J’.

Total Metals by EPA Method 6020 – The relative percent difference (RPD) for lead of 67.5% exceeded the laboratory control limit of 20% in the laboratory duplicate analysis of sample JC-12-SD-080627-URS. Upon comparison of physical and chemical results of other samples in the investigation, it was determined that qualification of only the parent sample was required. The arsenic result for the parent sample was qualified as estimated and flagged ‘J’.

5. Matrix Spike/Matrix Spike Duplicate (MS/MSD) – Acceptable
6. Laboratory Qualifiers

The laboratory flagged results detected at concentrations between the method detection

DATA QUALITY QA/QC REPORT

limit (MDL) and the method-reporting limit (MRL) with a 'B' to indicate that the concentration is estimated. This qualifier was amended to a 'J' as a result of this data review.

CONVENTIONAL CHEMISTRY PARAMETERS

Samples were analyzed for sulfate, total suspended solids, total dissolved solids, hardness and alkalinity by the methods identified in the introduction to this report.

1. Holding Times – Acceptable
2. Blanks – Acceptable
3. Laboratory Control Samples (LCS or Blank Spike) – Acceptable
4. Duplicate – Acceptable
5. Matrix Spike/Matrix Spike Duplicate (MS/MSD) – Acceptable

FIELD DUPLICATE

Samples submitted for field duplicate analysis and the associated parent sample are summarized below:

<u>Field Duplicate Sample ID</u>	<u>Parent Sample ID</u>	<u>Matrix</u>
AR-02-FT-DUP-080627-URS	AR-02-FT-080627-URS	Fish Tissue
WRS-1-DUP	WRS-1	Waste Rock
EC-04-SD-DUP-080625-URS	EC-04-SD-080625-URS	Sediment
EC-05-SD-DUP-080625-URS	EC-05-SD-080625-URS	Sediment
EC-05-RS-DUP-080625-URS	EC-05-RS-080625-URS	Riparian Soil
EC-04-SW-DUP-080625-URS	EC-04-SW-080625-URS	Surface Water
JC-07-SW-DUP-080626-URS	JC-07-SW-080625-URS	Surface Water

Field duplicates were collected at the appropriate frequency of one per twenty samples per matrix as required by the WSAP. RPDs were calculated for all results greater than five times the reporting limit. Project-specific criteria for field duplicate precision was not specifically delineated in the WSAP, however recommend criteria of 30% for solid matrices and 20% for water were applied. All calculated RPDs between the parent sample and field duplicate for all parameters were with these recommended limits with one exception. The RPD for iron in the analysis of AR-02-FT-DUP-080627-URS and AR-02-FT-080627-URS of 50% exceeded the recommended control limit. The total iron sample results for the parent/duplicate pair were qualified as estimated and flagged 'J'.

OVERALL ASSESSMENT OF DATA

The completeness of the CAS reports for the 2008 Site Investigation sampling events is 100%. The laboratory originally submitted the fish tissue results on a dry weight basis when results had

DATA QUALITY QA/QC REPORT

been requested on a wet weight basis. The laboratory promptly supplied the revised results for these analyses. The usefulness of this data is based on USEPA guidance documents referenced in the introduction to this report. Upon consideration of the information presented above, the data are considered usable. Data qualifiers assigned by the laboratory are shown on the laboratory reports.

DATA QUALIFIER DEFINITIONS:

- U The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
- J The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
- UJ The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
- R The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria.

Notes:

Sample matrix identified within Sample ID as:

SD = Sediment

RS = Riparian Soil

SW = Surface Water

WR = Waste Rock

FT = Fish Tissue

Samples collected at sample locations DAM-01, AD-01, AD-02, SP-01, SP-02 are water matrices.
