Subject: Blue Ledge Copper Mine

Siskiyou National Forest
P.A. Jones, Project Manager

The Confederated Tribes of Siletz Indians is very concerned about the impact that the Blue Ledge Copper Mine has on the natural resources in that area. The evidents is conclusive that through water analysis, fisheries, macroinvertebrates, and stream surveys that environmental damage is occurring to natural resources which can be directly attributed to the release of hazardous substances from the Blue Ledge Mine site. The Siletz Tribe has historical ties to this land and would support an cleanup project for this mine. CTSI would like to be kept informed of future action. Thank you for the opportunity to comment.
