

1. Make sure you have Google Earth loaded onto the computer that is accessing the map. If you do not have Google Earth loaded onto your computer, you can download it for free at <http://earth.google.com/>
2. Double click on .kmz file, and it should open up Google Earth and take you to the project automatically. If it does not do so automatically, right click on file and save to your computer. Next open up Google Earth. From the File menu in the upper left of the Google Earth start up screen click on Open. Navigate to where you saved the .kmz file, select it and press Open.

3. The globe will then spin and focus in on the Project Area.

Units can be made transparent by following the steps below:

1. Select Layer of interest

2. Use slide bar to adjust transparency of units
