

## Not R2 Sensitive Species and Not of Concern

### Recommendations and Evaluations

**Common Name:** Long-eared Myotis

**Scientific Name:** *Myotis evotis*

**Recommendation:** Not R2 Sensitive Species and Not of Concern

### Recommendation Rationale:

Species appears to have wide distribution within and outside R2, although patchy within range. Appears to be found in a wide variety of habitats and broad elevational range. Foraging habitat is likely stable. Appears to be fairly cosmopolitan in roost site selection. Little is known about population trend. As with most bats, there is a high degree of uncertainty about many factors related to life history, breeding biology, population trends, winter distribution, and precise habitat associations. Versatile species.
