Sensitive Species Recommendation (Please check 1 box below)						
<input checked="" type="checkbox"/>	R2 Sensitive Species (SS)		Not R2 SS, but should be considered for other Emphasis Species Lists			
<input type="checkbox"/>	Not R2 SS and Not of Concern Now		Insufficient Information Available to make a recommendation			
Recommendation Rationale						
<p>Populations of three intergrading varieties appear to be patchily distributed throughout most of North America. Occupies a wide array of habitats, but rare in R2. Habitat may be vulnerable to disturbance and populations may be susceptible to overcollecting. Seedling establishment may be limiting and is dependent on mycorrhizal fungi. The rarity and patchy distribution of the species, uncertainty with respect to reproductive capability, identified threats to species and habitat, and possible downward trends in habitat indicate that this species merits sensitive status.</p>
