Sensitive Species Recommendation (Please check 1 box below)					
<input checked="" type="checkbox"/>	R2 Sensitive Species (SS)	Not R2 SS, but should be considered for other Emphasis Species Lists			
<input type="checkbox"/>	Not R2 SS and Not of Concern Now	Insufficient Information Available to make a recommendation			
Recommendation Rationale					
<p>Widely distributed outside of R2, extending from Newfoundland to BC, south to MT, WY, IL, PN. In R2, only known occurrence is in the Laramie Range on the Medicine Bow, but also known from 2 other locations including Yellowstone NP. Associated with thermally-influenced seeps and springs, but may also occur in non-thermal areas. Habitats are small and isolated on the landscape. Threats include degradation of wetland habitats, timber harvest and livestock grazing. Merits sensitive status because of its rarity within the region, isolated distribution within and outside the region, and threats to habitat.</p>
