Sensitive Species Recommendation (Please check 1 box below)					
	R2 Sensitive Species (SS)	<input checked="" type="checkbox"/>	Not R2 SS, but should be considered for other Emphasis Species Lists		
	Not R2 SS and Not of Concern Now		Insufficient Information Available to make a recommendation		
Recommendation Rationale					
<p>-widespread outside R2 – northern half of US and most of Canada</p> <p>-more common than previously thought in SD after 2001-2002 field seasons: 21 verified locations, most found in 2001</p> <p>-habitat varies more than previously thought: consequently, this species may be underreported (in the BHNH it is likely underreported)</p> <p>-it's unclear what distribution and abundance are like in NE and CO – those states might want to complete more inventory</p> <p>Conclusion: this species doesn't warrant R2 sensitive status but should be considered for other emphasis species lists.</p>
