<input type="checkbox"/> Not R2 SS and Not of Concern Now		<input checked="" type="checkbox"/> Insufficient Information Available to make a recommendation			
Recommendation Rationale					
<p>Additional information is required for this species to make a recommendation. There are no data available for numbers of populations that occur and there is no census data for the number of individuals within populations. CO lists the species as an S1?Q. However, the species appears to have a fairly large distribution in Colorado as documented by the 50+ collection locations. These collections are indicated as herbarium specimens documented in the <i>Atlas of the Grasses of CO</i> (Rubright, 2000). These include locations on the Arapaho-Roosevelt, GMUG, San Juan, Rio Grande, Pike-San Isabel, Shoshone, Bighorn, Black Hills, and Medicine NF's. <i>C. stricta</i>'s habitat (willow carr, sedge wetlands, and shallow ponds) is vulnerable to grazing, peat mining, and off-road vehicle use. One of the reviewers had seen this species in CO on the drier edges of fen-like areas with beaked sedge (<i>Carex utriculata</i>) and water sedge (<i>Carex aquatilis</i>) above 9,800' in elevation.</p> <p>John Proctor and Gay Austin</p>
