<input type="checkbox"/> Not R2 SS and Not of Concern Now		<input checked="" type="checkbox"/> X	<input type="checkbox"/> Insufficient Information Available to make a recommendation		
Recommendation Rationale					
<p>Boreal species with widespread distribution in North America (G5) but disjunct in the southern Rocky Mountains in CO and WY. An obscure plant that can easily be overlooked; surveys are very incomplete. Found in wet sphagnum bogs or other wetlands. Populations appear to be stable (low confidence), although its wetland habitats are vulnerable to development. At this time, there is insufficient information available to determine whether the species merits sensitive status.</p>
