Sensitive Species Recommendation (Please check 1 box below)					
<input type="checkbox"/>	R2 Sensitive Species (SS)	<input type="checkbox"/> Not R2 SS, but should be considered for other Emphasis Species Lists			
<input type="checkbox"/>	Not R2 SS and Not of Concern Now	<input checked="" type="checkbox"/>	Insufficient Information Available to make a recommendation		
Recommendation Rationale					
<p>A circumboreal species, extending from Alaska to Greenland, south to Penn., Michigan, WY, ne UT and OR. Occurs on moist, sandy to gravelly banks of streams, lakes, and rivers or in seepage areas in sedge and graminoid-dominated meadows. In WY, occurs in the Sierra Madre Range and on the Yellowstone Plateau and in Jackson Hole. No information was provided by the evaluator on the distribution in CO. Until additional data are available to assess the distribution of the species in CO and potential threats to the species, there is insufficient information available to determine whether sensitive status is warranted.</p>
