<b>Sensitive Species Recommendation</b> (Please check 1 box below)					
<input type="checkbox"/> <b>R2 Sensitive Species (SS)</b>		<input type="checkbox"/> <b>Not R2 SS, but should be considered for other Emphasis Species Lists</b>			
<input type="checkbox"/> <b>Not R2 SS and Not of Concern Now</b>		<input checked="" type="checkbox"/>	<b>Insufficient Information Available to make a recommendation</b>		
<b>Recommendation Rationale</b>					
<p>The species has a wide distribution throughout the U.S., Mexico, central America, and the Caribbean, and apparently is widely distributed in South America as well. In R2, known from a few widely scattered locations, but it is easily overlooked. Ranked S1 in NE and SR in KS CO, and many other states across the southern U.S. Some concern was expressed about habitat loss in the Nebraska Sandhills. However, the distribution, abundance, and response of the species to management on NFS lands are not sufficiently well understood to determine whether this species merits sensitive status.</p>
