

TABLE PURSUANT TO KT-GT.4.2# - YARDING/SKIDDING REQUIREMENTS (05/2005)

YARDING/SKIDDING REQUIREMENTS

PAYMENT UNITS

In using ground based equipment, explain how you would minimize ground disturbance and compaction to no more than 20% of the harvest area to meet Forest Plan Standards?	All ground based units
--	------------------------

If skyline logging, explain your equipment capabilities relative to its ability to lateral yard, and yarding fan shaped and parallel settings.	All skyline units
--	-------------------

Except during lateral yarding, one end of the log must be suspended above the ground during inhaul.	All skyline units
---	-------------------

Tractor Road Obliteration

Unless otherwise agreed, tractor roads constructed for use with this contract shall be obliterated after they have served their purpose. Obliteration shall consist of recontouring excavated prism including all cut and fill slopes to natural ground contour. In addition, from _1_ to _5_ tons per acre of clearing or logging slash, stumps or other woody debris shall be placed and scattered on top of the recontoured corridor.	All Units
