<b>TAXON</b>	<b>Scientific Name</b>			<b>Common Name</b>		
PP	<i>Botrychium paradoxum</i>			peculiar moonwort		
<b>FWS</b>	<b>FS</b>	<b>BLM</b>				
<b>Grank</b>	<b>CO S Rank</b>	<b>WY S Rank</b>	<b>SD S Rank</b>	<b>NE S Rank</b>	<b>KS S Rank</b>	
G2		S1				
	<b>CO Status</b>	<b>WY Status</b>	<b>SD Status</b>	<b>NE Status</b>	<b>KS Status</b>	
<b>IUCN</b>	<b>PIF – Area Importance</b>		<b>PIF – Population Trend</b>			
<b>FS Experts assigned Species Evaluation</b>			<b>Non-NFS Experts assigned Species Evaluations</b>			
Andrew Kratz, RO						
<b>Sensitive Species Recommendation</b>				(Please check 1 box below)		
<b>X</b>	<b>R2 Sensitive Species (SS)</b>		<b>Not R2 SS, but should be considered for other Emphasis Species Lists</b>			
	<b>Not R2 SS and Not of Concern Now</b>		<b>Insufficient Information Available to make a recommendation</b>			
<b>Recommendation Rationale</b>						
<p>The species is globally rare. It merits sensitive species status because within Region 2 it is known from a single occurrence, with only five individuals. A single event could extirpate this population, so it is important that management actions in the area (or other suitable habitat) be analyzed for potential impacts, and mitigated if necessary.</p>
