Sensitive Species Recommendation			(Please check 1 box below)			
<input checked="" type="checkbox"/>	R2 Sensitive Species (SS)		Not R2 SS, but should be considered for other Emphasis Species Lists			
<input type="checkbox"/>	Not R2 SS and Not of Concern Now		Insufficient Information Available to make a recommendation			
Recommendation Rationale						
<p>Known from across the northern hemisphere, this species is at its southern edge of range in S2. Not known to occur on any NFS lands in WY; in CO, collected once on the Routt NF. Habitat described as mossy banks and saturated zones in wet meadows at 7,700-8,000 ft in WY; beaver ponds and wet spruce forests in CO. Although there is only one report of this species in R2, it appears that there is additional suitable habitat, and the plant has been found in Yellowstone NP and in R4. Recommend sensitive status due to its rarity and association with wetland habitats.</p>						

Name/Title	Nancy Warren & Jeff Redders	Date	Oct. 4, 2002
