PURPOSE AND CONTENTS

The purpose of the Special Use Permit program is to authorize special uses of land and/or water on the Cheyenne River Indian Reservation that are not covered by the current regulations for other uses of the land and/or water.

The Special Use Permit program is administered by the Bureau of Land Management (BLM) in cooperation with the Cheyenne River Indian Tribe (CRIT). The program is designed to provide a means for the CRIT to regulate the use of their lands and waters in a manner that is consistent with the goals and objectives of the CRIT.

The Special Use Permit program includes a variety of uses, including recreational activities, industrial activities, and scientific research. The program is designed to ensure that the uses of the land and waters on the CRIT are conducted in a way that is consistent with the needs of the CRIT and the public.

The Special Use Permit program is governed by the Special Use Permit Regulations, which are adopted by the CRIT. The regulations include provisions for the issuance of permits, the terms and conditions of the permits, and the procedures for the review and approval of permit applications.

The Special Use Permit program is designed to be flexible and adaptable, allowing the CRIT to respond to changes in the needs of the CRIT and the public. The program is intended to be an effective tool for the CRIT to manage their lands and waters in a way that is consistent with the needs of the CRIT and the public.
