Map C. Draft Existing Recreation Opportunity Spectrum zones. The Recreation Opportunity Spectrum (ROS) classifies recreation experiences from Urban to Primitive. The classification includes criteria such as distance from roads, likelihood of seeing other people, or presence of facilities. The primitive (P) or Semi-primitive Non-Motorized (SPNM) classifications are often associated with designated Wilderness. Semi-Primitive Motorized (SPM) might include an area near low speed roads. Roaded Natural (RN) could include areas near highly used roads. Because some designated wilderness areas have roads as boundaries, portions may be classified as SPM or RN, however, motorized activity is not allowed in designated wilderness.
