Beaver Creek Wilderness is located on Stearns District of the Daniel Boone National Forest. Towering sandstone cliffs, natural arches, hardwood forests, rippling streams and abundant wildlife are some of the special resources that led to designation of this 4,753-acre area as a wilderness in 1975. Beaver Creek Wilderness is an isolated, natural area where you may encounter adverse weather, wild animals and strenuous hiking conditions. Expect few trail signs or markers to guide you.

Before becoming a wilderness, this area was settled as a small coal mining and cooperage town during the late 1800s. Signs of the past remain visible with old roads, homeplaces, stone fencing, exotic shrubs and grave sites scattered throughout the area. Over time, nature is slowly erasing the signs that man left behind. The prehistoric use of the land at Beaver Creek dates back nearly 10,000 years. Archaeological evidence suggests that Native Americans used rock shelters in the area as temporary shelter, most likely for hunting and gathering. State and federal laws protect all archaeological resources. Do not collect or dig for artifacts.

The wilderness is surrounded by the Beaver Creek Wildlife Management Area, which is managed cooperatively between the Forest Service and the Kentucky Department of Fish and Wildlife Resources. Hunting is allowed in the wilderness. See Kentucky Hunting and Trapping Guide for hunting information.

## Storing Your Food and Trash in Bear Country

Unless cooking or eating, store your food inside a hardtop vehicle, the trunk of a car or a bear-resistant container. Store your food garbage in the same manner where trash cans are not installed.

When camping in the backcountry hang your food at least 10 feet off the ground and four feet away from a tree.

Food and trash storage is mandatory on the Daniel Boone National Forest.

### You are responsible for your own safety.

All outdoor activities have inherent risks and you may encounter a variety of unexpected and/or dangerous conditions. It is your responsibility to be informed and take precautions. Learn more at [www.fs.usda.gov/r8](http://www.fs.usda.gov/r8).

## What is Wilderness?

Not all forests are wilderness. A Wilderness is a special area that has been set aside by congress for preservation as a natural area for present and future generations. The Wilderness Act of 1964 designated the nation's first wilderness areas. The Daniel Boone National Forest manages two wilderness areas, Clifty Wilderness and Beaver Creek Wilderness.

The Wilderness Act defines wilderness as areas that:

- Are affected primarily by the forces of nature, where man is a visitor who does not remain.
- Possess outstanding opportunities for solitude or a primitive and unconfined type of recreation.
- Are undeveloped, federally owned, and generally over 5,000 acres in size.
- Are protected and managed so as to allow natural ecological processes to operate freely.
- May contain ecological, geological, or other features of scientific, educational, scenic, or historical value.
- Are formally designated by Congress as wilderness.

## Visiting a Wilderness

Wilderness areas are primitive in nature. The rugged natural environment challenges visitors to be self reliant and requires excellent outdoor skills. Modern facilities such as toilets, drinking water, shelters or campgrounds are not provided. Few, if any, signs or trails are provided to guide you. When entering a wilderness you are entering a remote site where cell or radio communications may not exist. Emergency services may be very limited.

Wilderness travel is by foot. Motorized vehicles and equipment such as all-terrain vehicles and chainsaws as well as mechanized equipment such as bicycles and wheeled carts are prohibited.

You are free to explore and discover all that wilderness provides including solitude, challenge, scenic beauty, and natural ecosystems. Hiking, camping, hunting and fishing are allowed.
