

ATTENTION

PRESCRIBED FIRES TO OCCUR

The areas shown on the map are designated for prescribed burning sometime during the spring of 2012, weather permitting. It will take at least one to two days to burn each unit. Burning may occur in any unit on any given day, and public access to the burn unit will be prohibited during the burning operations.

Burns will be conducted only when the weather conditions are favorable and resource objectives can be met, per the approved Prescribed Burn Plan. The purpose of these prescribed burns is to reduce hazardous fuels, improve wildlife habitat, and restore ecological processes.
