

White Mountain National Forest

Recreational Rock and Mineral Collecting

Standards and Guidelines

Management Areas Where Rock & Mineral Collecting is Allowed

- 2.1 General Forest Management
- 6.1 Semi-Primitive Recreation
- 6.2 Semi-Primitive Non-Motorized Recreation
- 6.3 Semi-Primitive Winter Motorized Recreation

WMNF Forest Plan standards and guidelines and management area maps can be found on our web site.

Recreational Rock and Mineral Collecting

The basis for managing the varied resources and activities on the White Mountain National Forest is the Land and Resource Management Plan (Forest Plan). It provides standards and guidelines to ensure that rock and geologic resources are protected, and that recreational rock and mineral collecting is carried on in such a way that many people can enjoy this recreational activity into the future.

Definitions

Recreational Rock and Mineral Collecting – Activity which involves the collection of many different types of rocks and minerals for personal enjoyment.

Surface disturbance – Digging, excavating, prying, destroying, or similar activity that results in the removal, displacement, or destruction of rocks, minerals, soil, or vegetation.

Collecting Conditions

Surface-disturbing rock and mineral collecting activities are only allowed in the management areas listed below the map on the back page. They must follow the Forest Plan standards and guidelines on the next page. More information about these management areas is available in the Forest Plan, <www.fs.fed.us/r9/white>.

A rock and mineral collecting use permit is being developed that will allow Forest Service managers to monitor collecting activities and associated impacts. The permit requirements are based on the Forest Plan standards and guidelines. There will be no charge for the permit, and the public will be notified when it is available.

Deer Hill, where purple amethyst is found, is a recreation fee site. Permits for this site can be purchased at the Deer Hill Trailhead, and at the Saco and Androscoggin Ranger District offices.

General Standards and Guidelines

- Only small hand tools are permitted. The use of power, mechanized equipment, or explosives is prohibited.
 - Maximum excavation at any one site is limited to one cubic yard. Only one site may be disturbed at a time.
 - Excavated holes must not be dug deeper than three feet as measured from the bottom of the hole to a projected horizontal line drawn between the bases of trees or plants adjoining the hole. In areas where the entire site is already disturbed and the original ground level altered, an estimated projection will be made of the earth's surface for the purposes of monitoring or enforcement.
 - Prior to leaving the site, restore the disturbed area similar to the condition you found it in.
 - No collecting activities are allowed within developed recreation areas, immediately adjacent to roads, trails, other facilities, in streambanks, wetlands, shores, designated rock climbing areas, or cultural or historic features.
 - Digging under trees or severing roots greater than ½ inch in diameter is not permitted.
 - Surface disturbance that creates or contributes to a safety hazard is not allowed.
 - Rock and mineral collecting is not permitted on, in, or adjacent to existing safety hazards, such as overhanging ledges, deep tunnels, and unstable slopes.
 - Gold panning for recreational purposes is allowed within active stream channels, provided due care is taken to protect water quality and aquatic habitat. Small trowels or similar digging tools for scooping sediment into the pan are allowed.
-
