**Logan Cave:**

The cave is gated closed to public entry. The cave was closed on October 1, 1997, to ensure the viability of a rare and special biological community of Townsend's Big-Eared Bats that is in the Logan Cave. The bats are particularly vulnerable to human disturbance during their periods of mating, hibernation, and maternity colony, which runs from about October to August each year. The Big-Eared Bat is listed as a sensitive species by both the Forest Service and Utah Division of Wildlife Resources. To aid with protecting this species during their vulnerable period, it is prohibited to go into or within 250 feet of the mouth of the Logan Cave.
