I have more comments on the Mike horse dam removal, I don't think we can possibly put up with several years of hauling by our front door. We just had a sample of what it would be like, 3 weeks of dump trucks hauling bedding material in to the dam for what looks like a bypass culvert. This went on from 7:30 am till 7:30 pm at 5 minute intervals. Beth I. a geologist for the Forest Service said that hauling would be done during normal office hours. What happened there.? The access road from Hwy 200 to the Mike Horse project is about 400 ft. from our house. Some of the drivers were courteous and slowed down and didn't use the jake brake, Others took offense when we asked them to do so and it got much worse. A highway junction like this needs to be signed and a speed limit imposed. Dust control needs to be accessed, also highway wear and tear. These trucks need to be weighed to help protect our roads. The traffic is very heavy on this road in the summer months, What about SAFETY?

I saw a letter on the cost of processing these wastes in place, costing over \$100 per yard. I would like to see where a amount like that was was gotten. It sounds way off base.

I love Lincoln Mt. and this is our retirement home. Is it going to also going to turn into a dirty dusty noisy race track? When someone gets killed out here, who is to blame? Yes we are mad.

Thanks for your your time. Denis and Linda Bordeleau.
