Subject: Mike Horse

As a native Montanan living in the Midwest, I have been keenly aware of the desire to place mine tailings (waste) in areas near or adjacent to private homes, waterways and recreational highways near Flesher Pass. The solution in finding a place to dump these tailings seems to be woefully self-serving and disappointing on every level.

With studies that seem to be sponsored by parties with an agenda, filled with inaccuracies and innuendos, this is the stuff movies and major lawsuits are made of. My desire is that cooler heads will prevail and a better, balanced and more comprehensive, environmentally sound solution can be presented. To date, I have not seen that offered and implore the powers to actually do their due diligence.

I offer my opinion and desire that you change course so that the Big Sky Country along Flesher Pass will remain as it is and always has been a place of incomparable beauty both above ground and below for generations way beyond the ones we see here today.

Please.

Thank you.
