

Using MapUpload program to Install the GPS Map on your Garmin GPS

NOTE: This map is not compatible with all GPS units. Do not attempt to use the software or provided map if your unit is not specifically mentioned at: <http://www.mapwel.eu/gpsunits.htm> .

The Black Hills National Forest is not responsible for any damages or losses that may result from the use of the software and/or maps provided on this site.

Installation:

1. If you loaded an older version of the Black Hills NF Travel Maps to your GPS unit previously, you will want to delete this map from your unit prior to loading the latest version. See "Uninstalling Maps" below.
2. Turn on your GPS and connect to your computer
3. Save and run executable file (MapUpload Program)
4. Look under IMG Map Files and confirm "<YEAR>BKFTTravelMap" is listed (where <YEAR> is current year)
5. If you wish to turn off GPS after transfer, check the box (GPS should be turned off and turned on again after map uploading for the new map to appear).
6. If you have custom maps already loaded on your GPS, such as MapSource TOPO US maps, and you want them to remain on your unit, check the box next to "**Add to existing maps.**" NOTE: If you leave this box unchecked, all of the custom maps you have loaded will be deleted and you will have to reinstall them (this does not affect pre-installed base maps on newer units). If you have large or many maps loaded on your GPS, it may take several hours to merge the maps. If there is not enough memory on your GPS unit for all the maps, the upload will fail, and you will have to remove some of your maps and re-try.
7. Click "Upload to GPS" to start the upload.
8. The map will appear as the top map in your GPS unit. The map is scalable, and you must "zoom in" to view the road and trail features. To turn off the map, navigate to the map set-up page in your GPS unit and under the information tab disable/uncheck the box next to the map.

Uninstalling Maps:

To uninstall older version(s) of the map, you will need to either: 1) overwrite it by installing a different map(s); 2) do not click the "Add to existing maps" box when you download the new file; or 3) delete the gmapsupp.img file from your unit. NOTE: Deleting the gmapsupp.img file will delete all of the custom maps from the GPS requiring you to reinstall them.
