FIRE BEHAVIOR FORECAST

FORECAST NUMBER: #24	TYPE OF FIRE: Wildland

DATE ISSUED 08/20/2012	TIME ISSUED: 1900

INPUTS

FUELS

Fuels in the fire area are primarily composed of **cured grass**, mixed **grass and brush** (less than 2 ft. tall), and **timber with understory**. Primary timber species include mixed-sized Ponderosa Pine, Western Juniper, and True Fir (at higher elevations). Brush and understory includes Mountain Mahogany, Bitterbrush, conifer dog-hair thickets, sagebrush, and Ceonothus (at higher elevations). Snags are common throughout timbered areas and may contribute to spotting. Live fuels will contribute to fire intensity and rate of spread.

WEATHER SUMMARY

See fire weather forecast for detailed information.

FIRE BEHAVIOR INPUTS

Windier conditions will test containment lines today. Daytime temperatures and humidity will continue to allow for flare-ups in the interior of the fire. Spotting will occur if flare-ups are next to containment lines. Rates of spread on open fire perimeters will continue to increase. Fire behavior will respond quickly to wind influences. For tonight, expect cool temperature and good humidity recovery which will minimize fire behavior. Spotting potential will decline rapidly after dark. Again, wind will override RH and fuel moisture.

- * Fine fuel moisture of 4% (exposed fuels) and 7% (shaded fuels) today.
 - * Fine fuel moisture nearing or surpassing 15% tonight.
 - * Probability of Ignition (PIG) 80% today, 15-30% tonight.
- Bitterbrush moisture 90%, Sagebrush 50%-60%

Today

Fuel Type	Rate of Spread	Flame Length	Spotting Distance	*15 mph wind and 40% Slope
Grass (GR2)	50-60 ch/hr.	4 – 6 feet	0.4 mile	130-140 ch/hr 8-10FL
Grass with mixed shrub (GS2)	20-30 ch/hr	5 – 7 feet	0.4 mile	125-140 ch/hr 11-12FL
Timber with Understory (TU5)	8-11 ch/hr	7-9 feet	0.4 mile	30-35 ch/hr 13-14 FL
*GS2 - primary spread fuel type	*low wind condition		*from flare-ups	*High intensity condition Spotting Dist. 0.7mi w/30 mph ws

Tonight

Fuel Type	Rate of Spread	Flame Length	Spotting Distance
Grass (GR2)	0-6 ch/hr.	0-2 feet	0.1 mile
Grass with mixed shrub (GS2)	0-3 ch/hr	0-1 feet	0.1mile
Timber with Understory (TU5)	2-4 ch/hr	3-5 feet	0.1mile
*GS2 - primary spread fuel type	*forecasted winds		*from flare-ups

SPECIFIC:

All Divisions

All divisions are in varied stages of improve, mop-up, patrol. Pockets of unburned fuel near containment lines are still a concern. Spotting potential will be very low after midnight but smoldering spots become active spots during the day. Any torching tree near containment lines are threats to containment. Snags will continue to be a hazard. Depth of mop-up is critical when reducing the threat of spotting.

****GUSTY WINDS will amplify spread rates and increase spotting. Watch the wind.****

****Observed flare-ups yesterday were in the crowns of trees within 10-15 minutes****

AIR OPERATIONS: No issues expected

FIRE BEHAVIOR SAFETY

Wind Gusts can develop quickly. Communicate when winds change direction or increase speed so those downwind know it is coming.

INCIDENT: Barry Point Fire	OPERATIONAL PERIOD: Day/Night 08-21-12
-----------------------------------	---

TOPICS:

Hazard Tree Safety Insect Bites Risk Management
--

NARRATIVE:

Hazard Trees

Hazard trees, both dead snags and live green trees, are one of the most common risks encountered on the fireline. All firefighters should frequently survey their work area for potential hazard trees.

- Situation Awareness:
- Current and Forecasted winds
- Night Operations
- Steep Slopes
- Diseased or bug kill areas
- Number and height of hazard trees
- Anticipated burn-down time
- Potential for trees to domino
- Flag hazard trees, notify supervisor, and request fallers.

Insect Bites

We are seeing a lot of insect bites on this fire and in camp.

- Zip up your tent
- Shake out your clothes before dressing
- Use insect repellent

Risk Management

- Gather information on Situational Awareness
- Assess hazards - Look up, Look down, Look around - Watch Outs
- Control hazards to extent possible
- Decide if hazard mitigations are effective
- Evaluate the situation and the human factor such as experience level, fatigue, attitude.

Patience and Tolerance

There are three parts to any incident;

- Getting here (safely)
- Doing the job we came here for (safely)
- Getting home (safely)

History has shown us that accident rates increase during this stage of an incident. Be aware of the following facts:

- People are already thinking about going home or the next assignment.
- People have more time to think about things that upset them during this incident.
- People are in transition and easily irritated.

Please be aware of these facts and take a little more time to use patience and tolerance when dealing with others before a simple interchange becomes a situation that gets out of control.
