

Bark Beetle Activity in Region 2 from the 2012 Aerial Detection Survey

Due to the nature of aerial surveys, the data on this map will only provide rough estimates of location, intensity and the resulting trend information for agents detectable from the air. Many of the most destructive diseases are not represented on this map because these agents are not detectable from aerial surveys. The data presented on this map should only be used as a partial indicator of insect and disease activity, and should be validated on the ground for actual location and causal agent. Shaded areas show locations where tree mortality or defoliation were apparent from the air. Intensity of damage is variable and not all trees in shaded areas are dead or defoliated.

2012 Aerial Detection Survey

- Mountain Pine Beetle
- Douglas-fir Beetle
- Spruce Beetle
- Subalpine Fir Decline
- Not Flown
