

Habitat Effectiveness

Habitat effectiveness does not constitute a decision, but provides information that is often critical in the implementation of standards and guidelines for project planning. The analysis included all roads and trails, both motorized and nonmotorized. The Routt National Forest portions of the Rawah and Neota Wilderness areas administered by the ARNF-PNG were not analyzed. Habitat effectiveness for the Pawnee National Grassland has not changed since the publication of the DEIS, a new map was not printed. This map has not been changed since the Forest Plan was printed in 1997.

-  Not National Forest System Lands
-  Geographic Areas
-  Wilderness
-  Least Disturbed Wildlife Habitat (97,466 Acres)
-  Most Disturbed Wildlife Habitat (624,663 Acres)
-  Lakes and Reservoirs (11,770 Acres)

0 2.5 5 10 Miles
Scale Approx. 1:230,000
